

Notice of Exemption (NOE)

Document Filed With: County Clerk County of Los Angeles 12400 Imperial Highway, Norwalk, CA 90650			
From (Public Agency):		Los Angeles Regional Interoperable Communications System (LA-RICS) Authority	
Project Title:	LA-RICS Public Safety Broadband Network (PSBN), also known as LA-RICS Long Term Evolution (LTE) System	Site Number:	CLM
Facility Name:	Claremont Microwave Tower	Facility Type:	Public Safety Entity
Project Description: (Technical Specifications)	Development at Site CLM will consist of collocation of LTE antennas on an existing tower on site, along with LTE communications and auxiliary equipment in an existing facility, and any off-site leased circuit work on previously disturbed land if needed, to support operation of the LTE system as appropriate.		
Jurisdiction Location:	Cities of Claremont and Upland	County Location:	Los Angeles and San Bernardino
Site Address:	1616 Monte Vista Claremont, CA 91711		
LatitudeWGS84:		LongitudeWGS84:	
Description of Nature, Purpose, and Beneficiaries of Project:	The LA-RICS LTE System Project is a modern, wireless voice and data communications system that would support 34,000 public safety responders and protect Los Angeles County's 10 million residents and 26 million annual visitors. The LTE technology would provide day-to-day data communication service for individual public safety agencies in Los Angeles County; enable critical communications for emergency response and regional interoperability; give emergency responders high speed access to life-saving multimedia information; and support the National Broadband Initiative.		
Name of Public Agency Approving Project:	LA-RICS Authority		
Name of Person or Agency Carrying Out Project:	LA-RICS Authority		
Exempt Status: Statutory Exemptions. Public Resources Code Section 21080.25. Categorical Exemptions. CEQA Guidelines Sections 15301, 15303, 15304.			Exempt
Reasons Why the Project Site is Exempt:	<p><u>Statutory Exemption Findings:</u></p> <p>(1) the site is publicly owned;</p> <p>(2) construction and implementation at the site would not have a substantial adverse impact on wetlands, riparian areas, or habitat of significant value, and would not harm any species protected by the federal Endangered Species Act of 1973 (16 U.S.C. Sec. 1531 et seq), the Native Plant Protection Act (Chapter 10 (commencing with Section 1900) of the Fish and Game Code), or The California Endangered Species Act (Chapter 1.5 (commencing with Section 2050) of Division 3 of the Fish and Game Code), or the habitat of those species;</p> <p>(3) construction and implementation at the site would not have a substantial adverse impact on historical resources pursuant to Section 21084.1 of the Public Resources Code;</p> <p>(4) operation of the project at the site would not exceed the maximum permissible exposure standards established by the Federal Communications Commission, as set forth in Sections 1.1307 and 1.1310 of Title 47 of the Code of Federal Regulations;</p> <p>(5) the LTE antenna support structures would comply with applicable state and federal height restrictions, and any height restrictions mandated by an applicable comprehensive land use plan adopted by an airport land use commission. The new monopole does not exceed 70 feet in height without appurtenances and attachments;</p> <p>(6) each new central system switch is located within an existing enclosed structure at a publicly owned project site, or is housed at an existing private communications facility; and</p> <p>(7) the site is not located on a school site or sacred cultural site.</p> <p><u>Categorical Exemption Findings:</u></p> <p>To the extent some leased circuit work may need to occur outside of a PSBN site, such work would involve minor alteration of existing facilities, mechanical equipment, and location of new small facilities as well as minor alteration in the condition of land within the public right-of-way. There would be negligible to no expansion of use associated with this activity since the fiber for the leased circuit lines are dedicated to providing this type of connectivity. Leased circuit work would not include the removal of healthy, mature scenic trees and would not be located in a particularly sensitive environment, and there are no cumulative impacts, unusual circumstances, or other limiting factors that would make the categorical exemptions inapplicable based on the project records.</p>

Notice of Exemption (NOE)

Document Filed With: County Clerk County of Los Angeles 12400 Imperial Highway, Norwalk, CA 90650			
From (Public Agency):		Los Angeles Regional Interoperable Communications System (LA-RICS) Authority	
Project Title:	LA-RICS Public Safety Broadband Network (PSBN), also known as LA-RICS Long Term Evolution (LTE) System	Site Number:	LACHAR
Facility Name:	Harbor UCLA Medical Center	Facility Type:	Medical
Project Description: (Technical Specifications)	Development at Site LACHAR will consist of an LTE facility utilizing a roof-mounted or building-mounted antenna structure, with antennas mounted at up to approximately 19 feet above the building roof line (or approximately 94 feet total height above ground level), except to the extent it is possible to collocate antennas on existing infrastructure, along with LTE communications and auxiliary equipment on the roof, and appurtenant ground equipment (e.g. emergency generator, fuel tank and utility conduits), as well as any off-site leased circuit work if needed, to support operation of the LTE facility as appropriate. The appurtenant ground equipment and off-site leased circuit work will be developed on previously disturbed land.		
Jurisdiction Location:	Unincorporated Los Angeles County	County Location:	Los Angeles
Site Address:	1000 W. Carson Street, Torrance, CA 90502		
LatitudeWGS84:		LongitudeWGS84:	
Description of Nature, Purpose, and Beneficiaries of Project:	The LA-RICS LTE System Project is a modern, wireless voice and data communications system that would support 34,000 public safety responders and protect Los Angeles County's 10 million residents and 26 million annual visitors. The LTE technology would provide day-to-day data communication service for individual public safety agencies in Los Angeles County; enable critical communications for emergency response and regional interoperability; give emergency responders high speed access to life-saving multimedia information; and support the National Broadband Initiative.		
Name of Public Agency Approving Project:	LA-RICS Authority		
Name of Person or Agency Carrying Out Project:	LA-RICS Authority		

Statutory Exemptions. Public Resources Code Section 21080.25.

Categorical Exemptions. CEQA Guidelines Sections 15301, 15303, 15304.

Exempt

Statutory Exemption Findings:

- (1) the site is publicly owned;
- (2) construction and implementation at the site would not have a substantial adverse impact on wetlands, riparian areas, or habitat of significant value, and would not harm any species protected by the federal Endangered Species Act of 1973 (16 U.S.C. Sec. 1531 et seq), the Native Plant Protection Act (Chapter 10 (commencing with Section 1900) of the Fish and Game Code), or The California Endangered Species Act (Chapter 1.5 (commencing with Section 2050) of Division 3 of the Fish and Game Code), or the habitat of those species;
- (3) construction and implementation at the site would not have a substantial adverse impact on historical resources pursuant to Section 21084.1 of the Public Resources Code;
- (4) operation of the project at the site would not exceed the maximum permissible exposure standards established by the Federal Communications Commission, as set forth in Sections 1.1307 and 1.1310 of Title 47 of the Code of Federal Regulations;
- (5) the LTE antenna support structures would comply with applicable state and federal height restrictions, and any height restrictions mandated by an applicable comprehensive land use plan adopted by an airport land use commission. The new monopole does not exceed 70 feet in height without appurtenances and attachments;
- (6) each new central system switch is located within an existing enclosed structure at a publicly owned project site, or is housed at an existing private communications facility; and
- (7) the site is not located on a school site or sacred cultural site.

Categorical Exemption Findings:

To the extent some leased circuit work may need to occur outside of a PSBN site, such work would involve minor alteration of existing facilities, mechanical equipment, and location of new small facilities as well as minor alteration in the condition of land within the public right-of-way. There would be negligible to no expansion of use associated with this activity since the fiber for the leased circuit lines are dedicated to providing this type of connectivity. Leased circuit work would not include the removal of healthy, mature scenic trees and would not be located in a particularly sensitive environment, and there are no cumulative impacts, unusual circumstances, or other limiting factors that would make the categorical exemptions inapplicable based on the project records.

- (2) construction and implementation at the site would not have a substantial adverse impact on wetlands, riparian areas, or habitat of significant value, and would not harm any species protected by the federal Endangered Species Act of 1973 (16 U.S.C. Sec. 1531 et seq), the Native Plant Protection Act (Chapter 10 (commencing with Section 1900) of the Fish and Game Code), or The California Endangered Species Act (Chapter 1.5 (commencing with Section 2050) of Division 3 of the Fish and Game Code), or the habitat of those species;
- (3) construction and implementation at the site would not have a substantial adverse impact on historical resources pursuant to Section 21084.1 of the Public Resources Code;
- (4) operation of the project at the site would not exceed the maximum permissible exposure standards established by the Federal Communications Commission, as set forth in Sections 1.1307 and 1.1310 of Title 47 of the Code of Federal Regulations;
- (5) the LTE antenna support structures would comply with applicable state and federal height restrictions, and any height restrictions mandated by an applicable comprehensive land use plan adopted by an airport land use commission. The new monopole does not exceed 70 feet in height without appurtenances and attachments;
- (6) each new central system switch is located within an existing enclosed structure at a publicly owned project site, or is housed at an existing private communications facility; and
- (7) the site is not located on a school site or sacred cultural site.

Categorical Exemption Findings:

To the extent some leased circuit work may need to occur outside of a PSBN site, such work would involve minor alteration of existing facilities, mechanical equipment, and location of new small facilities as well as minor alteration in the condition of land within the public right-of-way. There would be negligible to no expansion of use associated with this activity since the fiber for the leased circuit lines are dedicated to providing this type of connectivity. Leased circuit work would not include the removal of healthy, mature scenic trees and would not be located in a particularly sensitive environment, and there are no cumulative impacts, unusual circumstances, or other limiting factors that would make the categorical exemptions inapplicable based on the project records.

Notice of Exemption (NOE)

Document Filed With: County Clerk County of Los Angeles 12400 Imperial Highway, Norwalk, CA 90650			
From (Public Agency):		Los Angeles Regional Interoperable Communications System (LA-RICS) Authority	
Project Title:	LA-RICS Public Safety Broadband Network (PSBN), also known as LA-RICS Long Term Evolution (LTE) System	Site Number:	SCH
Facility Name:	San Pedro City Hall	Facility Type:	Civic Center
Project Description: (Technical Specifications)	Development at Site SCH will consist of an LTE facility utilizing a roof-mounted or building-mounted antenna structure, with antennas mounted at up to approximately 19 feet above the building roof line (or approximately 127 feet total height above ground level), except to the extent it is possible to collocate antennas on existing infrastructure, along with LTE communications and auxiliary equipment on the roof, and appurtenant ground equipment (e.g. emergency generator, fuel tank and utility conduits), as well as any off-site leased circuit work if needed, to support operation of the LTE facility as appropriate. The appurtenant ground equipment and off-site leased circuit work will be developed on previously disturbed land.		
Jurisdiction Location:	City of Los Angeles	County Location:	Los Angeles
Site Address:	638 Beacon Street, San Pedro, CA 90731		
LatitudeWGS84:		LongitudeWGS84:	
Description of Nature, Purpose, and Beneficiaries of Project:	The LA-RICS LTE System Project is a modern, wireless voice and data communications system that would support 34,000 public safety responders and protect Los Angeles County's 10 million residents and 26 million annual visitors. The LTE technology would provide day-to-day data communication service for individual public safety agencies in Los Angeles County; enable critical communications for emergency response and regional interoperability; give emergency responders high speed access to life-saving multimedia information; and support the National Broadband Initiative.		
Name of Public Agency Approving Project:	LA-RICS Authority		
Name of Person or Agency Carrying Out Project:	LA-RICS Authority		

us: Statutory Exemptions. Public Resources Code Section 21080.25.

Categorical Exemptions. CEQA Guidelines Sections 15301, 15303, 15304.

Exempt

Statutory Exemption Findings:

- (1) the site is publicly owned;
- (2) construction and implementation at the site would not have a substantial adverse impact on wetlands, riparian areas, or habitat of significant value, and would not harm any species protected by the federal Endangered Species Act of 1973 (16 U.S.C. Sec. 1531 et seq), the Native Plant Protection Act (Chapter 10 (commencing with Section 1900) of the Fish and Game Code), or The California Endangered Species Act (Chapter 1.5 (commencing with Section 2050) of Division 3 of the Fish and Game Code), or the habitat of those species;
- (3) construction and implementation at the site would not have a substantial adverse impact on historical resources pursuant to Section 21084.1 of the Public Resources Code;
- (4) operation of the project at the site would not exceed the maximum permissible exposure standards established by the Federal Communications Commission, as set forth in Sections 1.1307 and 1.1310 of Title 47 of the Code of Federal Regulations;
- (5) the LTE antenna support structures would comply with applicable state and federal height restrictions, and any height restrictions mandated by an applicable comprehensive land use plan adopted by an airport land use commission. The new monopole does not exceed 70 feet in height without appurtenances and attachments;
- (6) each new central system switch is located within an existing enclosed structure at a publicly owned project site, or is housed at an existing private communications facility; and
- (7) the site is not located on a school site or sacred cultural site.

Categorical Exemption Findings:

To the extent some leased circuit work may need to occur outside of a PSBN site, such work would involve minor alteration of existing facilities, mechanical equipment, and location of new small facilities as well as minor alteration in the condition of land within the public right-of-way. There would be negligible to no expansion of use associated with this activity since the fiber for the leased circuit lines are dedicated to providing this type of connectivity. Notice of Exemption (NOE)

Document Filed With: County Clerk County of Los Angeles 12400 Imperial Highway, Norwalk, CA 90650			
From (Public Agency):		Los Angeles Regional Interoperable Communications System (LA-RICS) Authority	
Project Title:	LA-RICS Public Safety Broadband Network (PSBN), also known as LA-RICS Long Term Evolution (LTE) System	Site Number:	BMT
Facility Name:	Bald Mountain	Facility Type:	Other
Project Description: (Technical Specifications)	Development of Site BMT will consist of an LTE facility with a new monopole, which shall not exceed 70 feet tall (without appurtenances and attachments), except to the extent it is possible to collocate antennas on existing towers and infrastructure, along with LTE communications and auxiliary equipment, appurtenant ground equipment (e.g. emergency generator, fuel tank, and utility conduits), and any off-site leased circuit work if needed, to support operation of the LTE facility as appropriate. The facility will be developed on previously disturbed land.		
Jurisdiction Location:	Unincorporated Los Angeles County	County Location:	Los Angeles
Site Address:	46811 Ridge Route Road, Gorman, CA 93536		
LatitudeWGS84:		LongitudeWGS84:	
Description of Nature, Purpose, and Beneficiaries of Project:	The LA-RICS LTE System Project is a modern, wireless voice and data communications system that would support 34,000 public safety responders and protect Los Angeles County's 10 million residents and 26 million annual visitors. The LTE technology would provide day-to-day data communication service for individual public safety agencies in Los Angeles County; enable critical communications for emergency response and regional interoperability; give emergency responders high speed access to life-saving multimedia information; and support the National Broadband Initiative.		
Name of Public Agency Approving Project:	LA-RICS Authority		
Name of Person or Agency Carrying Out Project:	LA-RICS Authority		
Exempt Status: Statutory Exemptions. Public Resources Code Section 21080.25.			Exempt
Categorical Exemptions. CEQA Guidelines Sections 15301, 15303, 15304.			

Statutory Exemption Findings:

- (1) the site is publicly owned;
- (2) construction and implementation at the site would not have a substantial adverse impact on wetlands, riparian areas, or habitat of significant value, and would not harm any species protected by the federal Endangered Species Act of 1973 (16 U.S.C. Sec. 1531 et seq), the Native Plant Protection Act (Chapter 10 (commencing with Section 1900) of the Fish and Game Code), or The California Endangered Species Act (Chapter 1.5 (commencing with Section 2050) of Division 3 of the Fish and Game Code), or the habitat of those species;
- (3) construction and implementation at the site would not have a substantial adverse impact on historical resources pursuant to Section 21084.1 of the Public Resources Code;
- (4) operation of the project at the site would not exceed the maximum permissible exposure standards established by the Federal Communications Commission, as set forth in Sections 1.1307 and 1.1310 of Title 47 of the Code of Federal Regulations;
- (5) the LTE antenna support structures would comply with applicable state and federal height restrictions, and any height restrictions mandated by an applicable comprehensive land use plan adopted by an airport land use commission. The new monopole does not exceed 70 feet in height without appurtenances and attachments;
- (6) each new central system switch is located within an existing enclosed structure at a publicly owned project site, or is housed at an existing private communications facility; and
- (7) the site is not located on a school site or sacred cultural site.

Categorical Exemption Findings:

To the extent some leased circuit work may need to occur outside of a PSBN site, such work would involve minor alteration of existing facilities, mechanical equipment, and location of new small facilities as well as minor alteration in the condition of land within the public right-of-way. There would be negligible to no expansion of use associated with this activity since the fiber for the leased circuit lines are dedicated to providing this type of connectivity. Leased circuit work would not include the removal of healthy, mature scenic trees and would not be located in a particularly sensitive environment, and there are no cumulative impacts, unusual circumstances, or other limiting factors that would make the categorical exemptions inapplicable based on the project records.

Sec. 1531 et seq), the Native Plant Protection Act (Chapter 10 (commencing with Section 1900) of the Fish and Game Code), or The California Endangered Species Act (Chapter 1.5 (commencing with Section 2050) of Division 3 of the Fish and Game Code), or the habitat of those species;
- (3) construction and implementation at the site would not have a substantial adverse impact on historical resources pursuant to Section 21084.1 of the Public Resources Code;
- (4) operation of the project at the site would not exceed the maximum permissible exposure standards established by the Federal Communications Commission, as set forth in Sections 1.1307 and 1.1310 of Title 47 of the Code of Federal Regulations;
- (5) the LTE antenna support structures would comply with applicable state and federal height restrictions, and any height restrictions mandated by an applicable comprehensive land use plan adopted by an airport land use commission. The new monopole does not exceed 70 feet in height without appurtenances and attachments;
- (6) each new central system switch is located within an existing enclosed structure at a publicly owned project site, or is housed at an existing private communications facility; and
- (7) the site is not located on a school site or sacred cultural site.

Categorical Exemption Findings:

To the extent some leased circuit work may need to occur outside of a PSBN site, such work would involve minor alteration of existing facilities, mechanical equipment, and location of new small facilities as well as minor alteration in the condition of land within the public right-of-way. There would be negligible to no expansion of use associated with this activity since the fiber for the leased circuit lines are dedicated to providing this type of connectivity. Leased circuit work would not include the removal of healthy, mature scenic trees and would not be located in a particularly sensitive environment, and there are no cumulative impacts, unusual circumstances, or other limiting factors that would make the categorical exemptions inapplicable based on the project records.

Notice of Exemption (NOE)

Document Filed With: County Clerk County of Los Angeles 12400 Imperial Highway, Norwalk, CA 90650			
From (Public Agency):		Los Angeles Regional Interoperable Communications System (LA-RICS) Authority	
Project Title:	LA-RICS Public Safety Broadband Network (PSBN), also known as LA-RICS Long Term Evolution (LTE) System	Site Number:	CLRMPD1
Facility Name:	Claremont Police Department	Facility Type:	Public Safety Entity
Project Description: (Technical Specifications)	Development of Site CLRMPD1 will consist of an LTE facility with a new monopole, which shall not exceed 70 feet tall (without appurtenances and attachments), except to the extent it is possible to collocate antennas on existing towers and infrastructure, along with LTE communications and auxiliary equipment, appurtenant ground equipment (e.g. emergency generator, fuel tank, and utility conduits), and any off-site leased circuit work if needed, to support operation of the LTE facility as appropriate. The facility will be developed on previously disturbed land.		
Jurisdiction Location:	City of Claremont	County Location:	Los Angeles
Site Address:	570 W. Bonita Avenue, Claremont, CA 91711		
LatitudeWGS84:		LongitudeWGS84:	
Description of Nature, Purpose, and Beneficiaries of Project:	The LA-RICS LTE System Project is a modern, wireless voice and data communications system that would support 34,000 public safety responders and protect Los Angeles County's 10 million residents and 26 million annual visitors. The LTE technology would provide day-to-day data communication service for individual public safety agencies in Los Angeles County; enable critical communications for emergency response and regional interoperability; give emergency responders high speed access to life-saving multimedia information; and support the National Broadband Initiative.		
Name of Public Agency Approving Project:	LA-RICS Authority		
Name of Person or Agency Carrying Out Project:	LA-RICS Authority		
Statutory Exemptions. Public Resources Code Section 21080.25.		Exempt	
Categorical Exemptions. CEQA Guidelines Sections 15301, 15303, 15304.			

Statutory Exemption Findings:

- (1) the site is publicly owned;
- (2) construction and implementation at the site would not have a substantial adverse impact on wetlands, riparian areas, or habitat of significant value, and would not harm any species protected by the federal Endangered Species Act of 1973 (16 U.S.C. Sec. 1531 et seq), the Native Plant Protection Act (Chapter 10 (commencing with Section 1900) of the Fish and Game Code), or The California Endangered Species Act (Chapter 1.5 (commencing with Section 2050) of Division 3 of the Fish and Game Code), or the habitat of those species;
- (3) construction and implementation at the site would not have a substantial adverse impact on historical resources pursuant to Section 21084.1 of the Public Resources Code;
- (4) operation of the project at the site would not exceed the maximum permissible exposure standards established by the Federal Communications Commission, as set forth in Sections 1.1307 and 1.1310 of Title 47 of the Code of Federal Regulations;
- (5) the LTE antenna support structures would comply with applicable state and federal height restrictions, and any height restrictions mandated by an applicable comprehensive land use plan adopted by an airport land use commission. The new monopole does not exceed 70 feet in height without appurtenances and attachments;
- (6) each new central system switch is located within an existing enclosed structure at a publicly owned project site, or is housed at an existing private communications facility; and
- (7) the site is not located on a school site or sacred cultural site.

Categorical Exemption Findings:

To the extent some leased circuit work may need to occur outside of a PSBN site, such work would involve minor alteration of existing facilities, mechanical equipment, and location of new small facilities as well as minor alteration in the condition of land within the public right-of-way. From (Public Agency):		Los Angeles Regional Interoperable Communications System (LA-RICS) Authority	
Project Title:	LA-RICS Public Safety Broadband Network (PSBN), also known as LA-RICS Long Term Evolution (LTE) System	Site Number:	FCCF
Facility Name:	Freeman Command and Control Facility Headquarters	Facility Type:	Public Safety Entity
Project Description: (Technical Specifications)	Development of Site FCCF will consist of an LTE facility with a new monopole, which shall not exceed 70 feet tall (without appurtenances and attachments), except to the extent it is possible to collocate antennas on existing towers and infrastructure, along with LTE communications and auxiliary equipment, appurtenant ground equipment (e.g. emergency generator, fuel tank, and utility conduits), and any off-site leased circuit work if needed, to support operation of the LTE facility as appropriate. The facility will be developed on previously disturbed land.		
Jurisdiction Location:	Unincorporated Los Angeles County	County Location:	Los Angeles
Site Address:	1320 N. Eastern Avenue, Los Angeles, CA 90063		
LatitudeWGS84:		LongitudeWGS84:	
Description of Nature, Purpose, and Beneficiaries of Project:	The LA-RICS LTE System Project is a modern, wireless voice and data communications system that would support 34,000 public safety responders and protect Los Angeles County's 10 million residents and 26 million annual visitors. The LTE technology would provide day-to-day data communication service for individual public safety agencies in Los Angeles County; enable critical communications for emergency response and regional interoperability; give emergency responders high speed access to life-saving multimedia information; and support the National Broadband Initiative.		
Name of Public Agency Approving Project:	LA-RICS Authority		
Name of Person or Agency Carrying Out Project:	LA-RICS Authority		
Exemption Status: Statutory Exemptions. Public Resources Code Section 21080.25.			Exempt
Categorical Exemptions. CEQA Guidelines Sections 15301, 15303, 15304.			

THIS NOTICE WAS POSTED

ON March 06 2014

UNTIL April 07 2014

REGISTRAR - RECORDER/COUNTY CLERK

Reasons why the Project Site

Statutory Exemption Findings:

- (1) the site is publicly owned;
- (2) construction and implementation at the site would not have a substantial adverse impact on wetlands, riparian areas, or habitat of significant value, and would not harm any species protected by the federal Endangered Species Act of 1973 (16 U.S.C. Sec. 1531 et seq), the Native Plant Protection Act (Chapter 10 (commencing with Section 1900) of the Fish and Game Code), or The California Endangered Species Act (Chapter 1.5 (commencing with Section 2050) of Division 3 of the Fish and Game Code), or the habitat of those species;
- (3) construction and implementation at the site would not have a substantial adverse impact on historical resources pursuant to Section 21084.1 of the Public Resources Code;
- (4) operation of the project at the site would not exceed the maximum permissible exposure standards established by the Federal Communications Commission, as set forth in Sections 1.1307 and 1.1310 of Title 47 of the Code of Federal Regulations;
- (5) the LTE antenna support structures would comply with applicable state and federal height restrictions, and any height restrictions mandated by an applicable comprehensive land use plan adopted by an airport land use commission. The new monopole does not exceed 70 feet in height without appurtenances and attachments;
- (6) each new central system switch is located within an existing enclosed structure at a publicly owned project site, or is housed at an existing private communications facility; and
- (7) the site is not located on a school site or sacred cultural site.

Categorical Exemption Findings:

To the extent some leased circuit work may need to occur outside of a PSBN site, such work would involve minor alteration of existing facilities, mechanical equipment, and location of new small facilities as well as minor alteration in the condition of land within the public right-of-way. There would be negligible to no expansion of use associated with this activity since the fiber for the leased circuit lines are dedicated to providing this type of connectivity. Leased circuit work would not include the removal of healthy, mature scenic trees and would not be located in a particularly sensitive environment, and there are no cumulative impacts, unusual circumstances, or other limiting factors that would make the categorical exemptions inapplicable based on the project records.

Notice of Exemption (NOE)

Document Filed With: County Clerk County of Los Angeles 12400 Imperial Highway, Norwalk, CA 90650			
From (Public Agency):		Los Angeles Regional Interoperable Communications System (LA-RICS) Authority	
Project Title:	LA-RICS Public Safety Broadband Network (PSBN), also known as LA-RICS Long Term Evolution (LTE) System	Site Number:	GLNDL24
Facility Name:	Glendale Fire Station 24	Facility Type:	Public Safety Entity
Project Description: (Technical Specifications)	Development of Site GLNDL24 will consist of an LTE facility with a new monopole, which shall not exceed 70 feet tall (without appurtenances and attachments), except to the extent it is possible to collocate antennas on existing towers and infrastructure, along with LTE communications and auxiliary equipment, appurtenant ground equipment (e.g. emergency generator, fuel tank, and utility conduits), and any off-site leased circuit work if needed, to support operation of the LTE facility as appropriate. The facility will be developed on previously disturbed land.		
Jurisdiction Location:	City of Glendale	County Location:	Los Angeles
Site Address:	1734 Canada Road, Glendale, CA 91208		
LatitudeWGS84:		LongitudeWGS84:	
Description of Nature, Purpose, and Beneficiaries of Project:	The LA-RICS LTE System Project is a modern, wireless voice and data communications system that would support 34,000 public safety responders and protect Los Angeles County's 10 million residents and 26 million annual visitors. The LTE technology would provide day-to-day data communication service for individual public safety agencies in Los Angeles County; enable critical communications for emergency response and regional interoperability; give emergency responders high speed access to life-saving multimedia information; and support the National Broadband Initiative.		
Name of Public Agency Approving Project:	LA-RICS Authority		
Name of Person or Agency Carrying Out Project:	LA-RICS Authority		
Exempt Status: Statutory Exemptions. Public Resources Code Section 21080.25.		Exempt	
		Categorical Exemptions. CEQA Guidelines Sections 15301, 15303, 15304.	

Statutory Exemption Findings:

- (1) the site is publicly owned;
- (2) construction and implementation at the site would not have a substantial adverse impact on wetlands, riparian areas, or habitat of significant value, and would not harm any species protected by the federal Endangered Species Act of 1973 (16 U.S.C. Sec. 1531 et seq), the Native Plant Protection Act (Chapter 10 (commencing with Section 1900) of the Fish and Game Code), or The California Endangered Species Act (Chapter 1.5 (commencing with Section 2050) of Division 3 of the Fish and Game Code), or the habitat of those species;
- (3) construction and implementation at the site would not have a substantial adverse impact on historical resources pursuant to Section 21084.1 of the Public Resources Code;
- (4) operation of the project at the site would not exceed the maximum permissible exposure standards established by the Federal Communications Commission, as set forth in Sections 1.1307 and 1.1310 of Title 47 of the Code of Federal Regulations;
- (5) the LTE antenna support structures would comply with applicable state and federal height restrictions, and any height restrictions mandated by an applicable comprehensive land use plan adopted by an airport land use commission. The new monopole does not exceed 70 feet in height without appurtenances and attachments;
- (6) each new central system switch is located within an existing enclosed structure at a publicly owned project site, or is housed at an existing private communications facility; and
- (7) the site is not located on a school site or sacred cultural site.

Categorical Exemption Findings:

To the extent some leased circuit work may need to occur outside of a PSBN site, such work would involve minor alteration of existing facilities, mechanical equipment, and location of new small facilities as well as minor alteration in the condition of land within the public right-of-way. There would be negligible to no expansion of use associated with this activity since the fiber for the leased circuit lines are dedicated to providing this type of connectivity. Leased circuit work would not include the removal of healthy, mature scenic trees and would not be located in a particularly sensitive environment, and there are no cumulative impacts, unusual circumstances, or other limiting factors that would make the categorical exemptions inapplicable based on the project records.

Notice of Exemption (NOE)

Document Filed With: County Clerk County of Los Angeles 12400 Imperial Highway, Norwalk, CA 90650			
From (Public Agency):		Los Angeles Regional Interoperable Communications System (LA-RICS) Authority	
Project Title:	LA-RICS Public Safety Broadband Network (PSBN), also known as LA-RICS Long Term Evolution (LTE) System	Site Number:	GLNDL28
Facility Name:	Glendale Fire Station 28	Facility Type:	Public Safety Entity
Project Description: (Technical Specifications)	Development of Site GLNDL28 will consist of an LTE facility with a new monopole, which shall not exceed 70 feet tall (without appurtenances and attachments), except to the extent it is possible to collocate antennas on existing towers and infrastructure, along with LTE communications and auxiliary equipment, appurtenant ground equipment (e.g. emergency generator, fuel tank, and utility conduits), and any off-site leased circuit work if needed, to support operation of the LTE facility as appropriate. The facility will be developed on previously disturbed land.		
Jurisdiction Location:	City of Glendale	County Location:	Los Angeles
Site Address:	4410 New York Avenue, Glendale, CA 91214		
LatitudeWGS84:		LongitudeWGS84:	
Description of Nature, Purpose, and Beneficiaries of Project:	The LA-RICS LTE System Project is a modern, wireless voice and data communications system that would support 34,000 public safety responders and protect Los Angeles County's 10 million residents and 26 million annual visitors. The LTE technology would provide day-to-day data communication service for individual public safety agencies in Los Angeles County; enable critical communications for emergency response and regional interoperability; give emergency responders high speed access to life-saving multimedia information; and support the National Broadband Initiative.		
Name of Public Agency Approving Project:	LA-RICS Authority		
Name of Person or Agency Carrying Out Project:	LA-RICS Authority		
Exempt Status: Statutory Exemptions. Public Resources Code Section 21080.25. Categorical Exemptions. CEQA Guidelines Sections 15301, 15303, 15304.			Exempt

Statutory Exemption Findings:

- (1) the site is publicly owned;
- (2) construction and implementation at the site would not have a substantial adverse impact on wetlands, riparian areas, or habitat of significant value, and would not harm any species protected by the federal Endangered Species Act of 1973 (16 U.S.C. Sec. 1531 et seq), the Native Plant Protection Act (Chapter 10 (commencing with Section 1900) of the Fish and Game Code), or The California Endangered Species Act (Chapter 1.5 (commencing with Section 2050) of Division 3 of the Fish and Game Code), or the habitat of those species;
- (3) construction and implementation at the site would not have a substantial adverse impact on historical resources pursuant to Section 21084.1 of the Public Resources Code;
- (4) operation of the project at the site would not exceed the maximum permissible exposure standards established by the Federal Communications Commission, as set forth in Sections 1.1307 and 1.1310 of Title 47 of the Code of Federal Regulations;
- (5) the LTE antenna support structures would comply with applicable state and federal height restrictions, and any height restrictions mandated by an applicable comprehensive land use plan adopted by an airport land use commission. The new monopole does not exceed 70 feet in height without appurtenances and attachments;
- (6) each new central system switch is located within an existing enclosed structure at a publicly owned project site, or is housed at an existing private communications facility; and
- (7) the site is not located on a school site or sacred cultural site.

Categorical Exemption Findings:

To the extent some leased circuit work may need to occur outside of a PSBN site, such work would involve minor alteration of existing facilities, mechanical equipment, and location of new small facilities as well as minor alteration in the condition of land within the public right-of-way. There would be negligible to no expansion of use associated with this activity since the fiber for the leased circuit lines are dedicated to providing this type of connectivity. Leased circuit work would not include the removal of healthy, mature scenic trees and would not be located in a particularly sensitive environment, and there are no cumulative impacts, unusual circumstances, or other limiting factors that would make the categorical exemptions inapplicable based on the project records.

LatitudeWGS84:		LongitudeWGS84:	
Description of Nature, Purpose, and Beneficiaries of Project:	The LA-RICS LTE System Project is a modern, wireless voice and data communications system that would support 34,000 public safety responders and protect Los Angeles County's 10 million residents and 26 million annual visitors. The LTE technology would provide day-to-day data communication service for individual public safety agencies in Los Angeles County; enable critical communications for emergency response and regional interoperability; give emergency responders high speed access to life-saving multimedia information; and support the National Broadband Initiative.		
Name of Public Agency Approving Project:	LA-RICS Authority		
Name of Person or Agency Carrying Out Project:	LA-RICS Authority		
Exempt Status: Statutory Exemptions. Public Resources Code Section 21080.25. Categorical Exemptions. CEQA Guidelines Sections 15301, 15303, 15304.			Exempt

Statutory Exemption Findings:

- (1) the site is publicly owned;
- (2) construction and implementation at the site would not have a substantial adverse impact on wetlands, riparian areas, or habitat of significant value, and would not harm any species protected by the federal Endangered Species Act of 1973 (16 U.S.C. Sec. 1531 et seq), the Native Plant Protection Act (Chapter 10 (commencing with Section 1900) of the Fish and Game Code), or The California Endangered Species Act (Chapter 1.5 (commencing with Section 2050) of Division 3 of the Fish and Game Code), or the habitat of those species;
- (3) construction and implementation at the site would not have a substantial adverse impact on historical resources pursuant to Section 21084.1 of the Public Resources Code;
- (4) operation of the project at the site would not exceed the maximum permissible exposure standards established by the Federal Communications Commission, as set forth in Sections 1.1307 and 1.1310 of Title 47 of the Code of Federal Regulations;
- (5) the LTE antenna support structures would comply with applicable state and federal height restrictions, and any height restrictions mandated by an applicable comprehensive land use plan adopted by an airport land use commission. The new monopole does not exceed 70 feet in height without appurtenances and attachments;
- (6) each new central system switch is located within an existing enclosed structure at a publicly owned project site, or is housed at an existing private communications facility; and
- (7) the site is not located on a school site or sacred cultural site.

Categorical Exemption Findings:

To the extent some leased circuit work may need to occur outside of a PSBN site, such work would involve minor alteration of existing facilities, mechanical equipment, and location of new small facilities as well as minor alteration in the condition of land within the public right-of-way. There would be negligible to no expansion of use associated with this activity since the fiber for the leased circuit lines are dedicated to providing this type of connectivity. Leased circuit work would not include the removal of healthy, mature scenic trees and would not be located in a particularly sensitive environment, and there are no cumulative impacts, unusual circumstances, or other limiting factors that would make the categorical exemptions inapplicable based on the project records.

Categorical Exemption Findings:

To the extent some leased circuit work may need to occur outside of a PSBN site, such work would involve minor alteration of existing facilities, mechanical equipment, and location of new small facilities as well as minor alteration in the condition of land within the public right-of-way. There would be negligible to no expansion of use associated with this activity since the fiber for the leased circuit lines are dedicated to providing this type of connectivity. Leased circuit work would not include the removal of healthy, mature scenic trees and would not be located in a particularly sensitive environment, and there are no cumulative impacts, unusual circumstances, or other limiting factors that would make the categorical exemptions inapplicable based on the project records.

Notice of Exemption (NOE)

Document Filed With: County Clerk County of Los Angeles 12400 Imperial Highway, Norwalk, CA 90650			
From (Public Agency):		Los Angeles Regional Interoperable Communications System (LA-RICS) Authority	
Project Title:	LA-RICS Public Safety Broadband Network (PSBN), also known as LA-RICS Long Term Evolution (LTE) System	Site Number:	LACF050
Facility Name:	Los Angeles County Fire Station 50	Facility Type:	Public Safety Entity
Project Description: (Technical Specifications)	Development of Site LACF050 will consist of an LTE facility with a new monopole, which shall not exceed 70 feet tall (without appurtenances and attachments), except to the extent it is possible to collocate antennas on existing towers and infrastructure, along with LTE communications and auxiliary equipment, appurtenant ground equipment (e.g. emergency generator, fuel tank, and utility conduits), and any off-site leased circuit work if needed, to support operation of the LTE facility as appropriate. The facility will be developed on previously disturbed land.		
Jurisdiction Location:	City of Commerce	County Location:	Los Angeles
Site Address:	2327 S. Saybrook Avenue, Commerce, CA 90040		
LatitudeWGS84:		LongitudeWGS84:	
Description of Nature, Purpose, and Beneficiaries of Project:	The LA-RICS LTE System Project is a modern, wireless voice and data communications system that would support 34,000 public safety responders and protect Los Angeles County's 10 million residents and 26 million annual visitors. The LTE technology would provide day-to-day data communication service for individual public safety agencies in Los Angeles County; enable critical communications for emergency response and regional interoperability; give emergency responders high speed access to life-saving multimedia information; and support the National Broadband Initiative.		
Name of Public Agency Approving Project:	LA-RICS Authority		
Name of Person or Agency Carrying Out Project:	LA-RICS Authority		

Statutory Exemptions. Public Resources Code Section 21080.25.

Categorical Exemptions. CEQA Guidelines Sections 15301, 15303, 15304.

Exempt

Statutory Exemption Findings:

- (1) the site is publicly owned;
- (2) construction and implementation at the site would not have a substantial adverse impact on wetlands, riparian areas, or habitat of significant value, and would not harm any species protected by the federal Endangered Species Act of 1973 (16 U.S.C. Sec. 1531 et seq), the Native Plant Protection Act (Chapter 10 (commencing with Section 1900) of the Fish and Game Code), or The California Endangered Species Act (Chapter 1.5 (commencing with Section 2050) of Division 3 of the Fish and Game Code), or the habitat of those species;
- (3) construction and implementation at the site would not have a substantial adverse impact on historical resources pursuant to Section 21084.1 of the Public Resources Code;
- (4) operation of the project at the site would not exceed the maximum permissible exposure standards established by the Federal Communications Commission, as set forth in Sections 1.1307 and 1.1310 of Title 47 of the Code of Federal Regulations;
- (5) the LTE antenna support structures would comply with applicable state and federal height restrictions, and any height restrictions mandated by an applicable comprehensive land use plan adopted by an airport land use commission. The new monopole does not exceed 70 feet in height without appurtenances and attachments;
- (6) each new central system switch is located within an existing enclosed structure at a publicly owned project site, or is housed at an existing private communications facility; and
- (7) the site is not located on a school site or sacred cultural site.

Categorical Exemption Findings:

To the extent some leased circuit work may need to occur outside of a PSBN site, such work would involve minor alteration of existing facilities, mechanical equipment, and location of new small facilities as well as minor alteration in the condition of land within the public right-of-way. There would be negligible to no expansion of use associated with this activity since the fiber for the leased circuit lines are dedicated to providing this type of connectivity. Dean C. Logan, Registrar - Recorder/County Clerk

Electronically signed by BRANDIE EVANS

Statutory Exemption Findings:

- (1) the site is publicly owned;
- (2) construction and implementation at the site would not have a substantial adverse impact on wetlands, riparian areas, or habitat of significant value, and would not harm any species protected by the federal Endangered Species Act of 1973 (16 U.S.C. Sec. 1531 et seq), the Native Plant Protection Act (Chapter 10 (commencing with Section 1900) of the Fish and Game Code), or The California Endangered Species Act (Chapter 1.5 (commencing with Section 2050) of Division 3 of the Fish and Game Code), or the habitat of those species;
- (3) construction and implementation at the site would not have a substantial adverse impact on historical resources pursuant to Section 21084.1 of the Public Resources Code;
- (4) operation of the project at the site would not exceed the maximum permissible exposure standards established by the Federal Communications Commission, as set forth in Sections 1.1307 and 1.1310 of Title 47 of the Code of Federal Regulations;
- (5) the LTE antenna support structures would comply with applicable state and federal height restrictions, and any height restrictions mandated by an applicable comprehensive land use plan adopted by an airport land use commission. The new monopole does not exceed 70 feet in height without appurtenances and attachments;
- (6) each new central system switch is located within an existing enclosed structure at a publicly owned project site, or is housed at an existing private communications facility; and
- (7) the site is not located on a school site or sacred cultural site.

Categorical Exemption Findings:

To the extent some leased circuit work may need to occur outside of a PSBN site, such work would involve minor alteration of existing facilities, mechanical equipment, and location of new small facilities as well as minor alteration in the condition of land within the public right-of-way. There would be negligible to no expansion of use associated with this activity since the fiber for the leased circuit lines are dedicated to providing this type of connectivity. Leased circuit work would not include the removal of healthy, mature scenic trees and would not be located in a particularly sensitive environment, and there are no cumulative impacts, unusual circumstances, or other limiting factors that would make the categorical exemptions inapplicable based on the project records.

Document Filed With: County Clerk County of Los Angeles 12400 Imperial Highway, Norwalk, CA 90650			
From (Public Agency):		Los Angeles Regional Interoperable Communications System (LA-RICS) Authority	
Project Title:	LA-RICS Public Safety Broadband Network (PSBN), also known as LA-RICS Long Term Evolution (LTE) System	Site Number:	LACF068
Facility Name:	Los Angeles County Fire Station 68	Facility Type:	Public Safety Entity
Project Description: (Technical Specifications)	Development of Site LACF068 will consist of an LTE facility with a new monopole, which shall not exceed 70 feet tall (without appurtenances and attachments), except to the extent it is possible to collocate antennas on existing towers and infrastructure, along with LTE communications and auxiliary equipment, appurtenant ground equipment (e.g. emergency generator, fuel tank, and utility conduits), and any off-site leased circuit work if needed, to support operation of the LTE facility as appropriate. The facility will be developed on previously disturbed land.		
Jurisdiction Location:	City of Calabasas	County Location:	Los Angeles
Site Address:	24130 Calabasas Road, Calabasas, CA 91302		
LatitudeWGS84:		LongitudeWGS84:	
Description of Nature, Purpose, and Beneficiaries of Project:	The LA-RICS LTE System Project is a modern, wireless voice and data communications system that would support 34,000 public safety responders and protect Los Angeles County's 10 million residents and 26 million annual visitors. The LTE technology would provide day-to-day data communication service for individual public safety agencies in Los Angeles County; enable critical communications for emergency response and regional interoperability; give emergency responders high speed access to life-saving multimedia information; and support the National Broadband Initiative.

Document Filed With: County Clerk County of Los Angeles 12400 Imperial Highway, Norwalk, CA 90650			
From (Public Agency):		Los Angeles Regional Interoperable Communications System (LA-RICS) Authority	
Project Title:	LA-RICS Public Safety Broadband Network (PSBN), also known as LA-RICS Long Term Evolution (LTE) System	Site Number:	LACF077
Facility Name:	Los Angeles County Fire Station 77	Facility Type:	Public Safety Entity
Project Description: (Technical Specifications)	Development of Site LACF077 will consist of an LTE facility with a new monopole, which shall not exceed 70 feet tall (without appurtenances and attachments), except to the extent it is possible to collocate antennas on existing towers and infrastructure, along with LTE communications and auxiliary equipment, appurtenant ground equipment (e.g. emergency generator, fuel tank, and utility conduits), and any off-site leased circuit work if needed, to support operation of the LTE facility as appropriate. The facility will be developed on previously disturbed land.		
Jurisdiction Location:	Unincorporated Los Angeles County	County Location:	Los Angeles
Site Address:	46833 Peace Valley Road, Gorman, CA 93243		
LatitudeWGS84:		LongitudeWGS84:	
Description of Nature, Purpose, and Beneficiaries of Project:	The LA-RICS LTE System Project is a modern, wireless voice and data communications system that would support 34,000 public safety responders and protect Los Angeles County's 10 million residents and 26 million annual visitors. The LTE technology would provide day-to-day data communication service for individual public safety agencies in Los Angeles County; enable critical communications for emergency response and regional interoperability; give emergency responders high speed access to life-saving multimedia information; and support the National Broadband Initiative.		
Name of Public Agency Approving Project:	LA-RICS Authority		
Name of Person or Agency Carrying Out Project:	LA-RICS Authority		
Exemption Status: Statutory Exemptions. Public Resources Code Section 21080.25.			Exempt
Categorical Exemptions. CEQA Guidelines Sections 15301, 15303, 15304.			

Statutory Exemption Findings:

- (1) the site is publicly owned;
- (2) construction and implementation at the site would not have a substantial adverse impact on wetlands, riparian areas, or habitat of significant value, and would not harm any species protected by the federal Endangered Species Act of 1973 (16 U.S.C. Sec. 1531 et seq), the Native Plant Protection Act (Chapter 10 (commencing with Section 1900) of the Fish and Game Code), or The California Endangered Species Act (Chapter 1.5 (commencing with Section 2050) of Division 3 of the Fish and Game Code), or the habitat of those species;
- (3) construction and implementation at the site would not have a substantial adverse impact on historical resources pursuant to Section 21084.1 of the Public Resources Code;
- (4) operation of the project at the site would not exceed the maximum permissible exposure standards established by the Federal Communications Commission, as set forth in Sections 1.1307 and 1.1310 of Title 47 of the Code of Federal Regulations;
- (5) the LTE antenna support structures would comply with applicable state and federal height restrictions, and any height restrictions mandated by an applicable comprehensive land use plan adopted by an airport land use commission. The new monopole does not exceed 70 feet in height without appurtenances and attachments;
- (6) each new central system switch is located within an existing enclosed structure at a publicly owned project site, or is housed at an existing private communications facility; and
- (7) the site is not located on a school site or sacred cultural site.

Categorical Exemption Findings:

To the extent some leased circuit work may need to occur outside of a PSBN site, such work would involve minor alteration of existing facilities, mechanical equipment, and location of new small facilities as well as minor alteration in the condition of land within the public right-of-way. There would be negligible to no expansion of use associated with this activity since the fiber for the leased circuit lines are dedicated to providing this type of connectivity. Leased circuit work would not include the removal of healthy, mature scenic trees and would not be located in a particularly sensitive environment, and there are no cumulative impacts, unusual circumstances, or other limiting factors that would make the categorical exemptions inapplicable based on the project records.

Name of Person or Agency Carrying Out Project:	LA-RICS Authority		
Exempt Status: Statutory Exemptions. Public Resources Code Section 21080.25. Categorical Exemptions. CEQA Guidelines Sections 15301, 15303, 15304.			Exempt
Reasons Why	<p><u>Statutory Exemption Findings:</u></p> <p>(1) the site is publicly owned;</p> <p>(2) construction and implementation at the site would not have a substantial adverse impact on wetlands, riparian areas, or habitat of significant value, and would not harm any species protected by the federal Endangered Species Act of 1973 (16 U.S.C. Sec. 1531 et seq), the Native Plant Protection Act (Chapter 10 (commencing with Section 1900) of the Fish and Game Code), or The California Endangered Species Act (Chapter 1.5 (commencing with Section 2050) of Division 3 of the Fish and Game Code), or the habitat of those species;</p> <p>(3) construction and implementation at the site would not have a substantial adverse impact on historical resources pursuant to Section 21084.1 of the Public Resources Code;</p> <p>(4) operation of the project at the site would not exceed the maximum permissible exposure standards established by the Federal Communications Commission, as set forth in Sections 1.1307 and 1.1310 of Title 47 of the Code of Federal Regulations;</p> <p>(5) the LTE antenna support structures would comply with applicable state and federal height restrictions, and any height restrictions mandated by an applicable comprehensive land use plan adopted by an airport land use commission. The new monopole does not exceed 70 feet in height without appurtenances and attachments;</p> <p>(6) each new central system switch is located within an existing enclosed structure at a publicly owned project site, or is housed at an existing private communications facility; and</p> <p>(7) the site is not located on a school site or sacred cultural site.</p> <p><u>Categorical Exemption Findings:</u></p> <p>To the extent some leased circuit work may need to occur outside of a PSBN site, such work would involve minor alteration of existing facilities, mechanical equipment, and location of new small facilities as well as minor alteration in the condition of land within the public right-of-way. There would be negligible to no expansion of use associated with this activity since the fiber for the leased circuit lines are dedicated to providing this type of connectivity. Leased circuit work would not include the removal of healthy, mature scenic trees and would not be located in a particularly sensitive environment, and there are no cumulative impacts, unusual circumstances, or other limiting factors that would make the categorical exemptions inapplicable based on the project records.</p>

Notice of Exemption (NOE)

Document Filed With: County Clerk County of Los Angeles 12400 Imperial Highway, Norwalk, CA 90650			
From (Public Agency):		Los Angeles Regional Interoperable Communications System (LA-RICS) Authority	
Project Title:	LA-RICS Public Safety Broadband Network (PSBN), also known as LA-RICS Long Term Evolution (LTE) System	Site Number:	LACF085
Facility Name:	Los Angeles County Fire Station 85	Facility Type:	Public Safety Entity
Project Description: (Technical Specifications)	Development of Site LACF085 will consist of an LTE facility with a new monopole, which shall not exceed 70 feet tall (without appurtenances and attachments), except to the extent it is possible to collocate antennas on existing towers and infrastructure, along with LTE communications and auxiliary equipment, appurtenant ground equipment (e.g. emergency generator, fuel tank, and utility conduits), and any off-site leased circuit work if needed, to support operation of the LTE facility as appropriate. The facility will be developed on previously disturbed land.		
Jurisdiction Location:	City of Glendora	County Location:	Los Angeles
Site Address:	650 E. Gladstone Street, Glendora, CA 91740		
LatitudeWGS84:		LongitudeWGS84:	
Description of Nature, Purpose, and Beneficiaries of Project:	The LA-RICS LTE System Project is a modern, wireless voice and data communications system that would support 34,000 public safety responders and protect Los Angeles County's 10 million residents and 26 million annual visitors. The LTE technology would provide day-to-day data communication service for individual public safety agencies in Los Angeles County; enable critical communications for emergency response and regional interoperability; give emergency responders high speed access to life-saving multimedia information; and support the National Broadband Initiative.

Reasons Why	<p><u>Statutory Exemption Findings:</u></p> <p>(1) the site is publicly owned;</p> <p>(2) construction and implementation at the site would not have a substantial adverse impact on wetlands, riparian areas, or habitat of significant value, and would not harm any species protected by the federal Endangered Species Act of 1973 (16 U.S.C. Sec. 1531 et seq), the Native Plant Protection Act (Chapter 10 (commencing with Section 1900) of the Fish and Game Code), or The California Endangered Species Act (Chapter 1.5 (commencing with Section 2050) of Division 3 of the Fish and Game Code), or the habitat of those species;</p> <p>(3) construction and implementation at the site would not have a substantial adverse impact on historical resources pursuant to Section 21084.1 of the Public Resources Code;</p> <p>(4) operation of the project at the site would not exceed the maximum permissible exposure standards established by the Federal Communications Commission, as set forth in Sections 1.1307 and 1.1310 of Title 47 of the Code of Federal Regulations;</p> <p>(5) the LTE antenna support structures would comply with applicable state and federal height restrictions, and any height restrictions mandated by an applicable comprehensive land use plan adopted by an airport land use commission. The new monopole does not exceed 70 feet in height without appurtenances and attachments;</p> <p>(6) each new central system switch is located within an existing enclosed structure at a publicly owned project site, or is housed at an existing private communications facility; and</p> <p>(7) the site is not located on a school site or sacred cultural site.</p> <p><u>Categorical Exemption Findings:</u></p> <p>To the extent some leased circuit work may need to occur outside of a PSBN site, such work would involve minor alteration of existing facilities, mechanical equipment, and location of new small facilities as well as minor alteration in the condition of land within the public right-of-way. There would be negligible to no expansion of use associated with this activity since the fiber for the leased circuit lines are dedicated to providing this type of connectivity. Leased circuit work would not include the removal of healthy, mature scenic trees and would not be located in a particularly sensitive environment, and there are no cumulative impacts, unusual circumstances, or other limiting factors that would make the categorical exemptions inapplicable based on the project records.</p>

Notice of Exemption (NOE)

Document Filed With: County Clerk County of Los Angeles 12400 Imperial Highway, Norwalk, CA 90650			
From (Public Agency):		Los Angeles Regional Interoperable Communications System (LA-RICS) Authority	
Project Title:	LA-RICS Public Safety Broadband Network (PSBN), also known as LA-RICS Long Term Evolution (LTE) System	Site Number:	LACF092
Facility Name:	Los Angeles County Fire Station 92	Facility Type:	Public Safety Entity
Project Description: (Technical Specifications)	Development of Site LACF092 will consist of an LTE facility with a new monopole, which shall not exceed 70 feet tall (without appurtenances and attachments), except to the extent it is possible to collocate antennas on existing towers and infrastructure, along with LTE communications and auxiliary equipment, appurtenant ground equipment (e.g. emergency generator, fuel tank, and utility conduits), and any off-site leased circuit work if needed, to support operation of the LTE facility as appropriate. The facility will be developed on previously disturbed land.		
Jurisdiction Location:	Unincorporated Los Angeles County	County Location:	Los Angeles
Site Address:	8905 E. Avenue U, Littlerock, CA 93535		
LatitudeWGS84:		LongitudeWGS84:	
Description of Nature, Purpose, and Beneficiaries of Project:	The LA-RICS LTE System Project is a modern, wireless voice and data communications system that would support 34,000 public safety responders and protect Los Angeles County's 10 million residents and 26 million annual visitors. The LTE technology would provide day-to-day data communication service for individual public safety agencies in Los Angeles County; enable critical communications for emergency response and regional interoperability; give emergency responders high speed access to life-saving multimedia information; and support the National Broadband Initiative.		
Name of Public Agency Approving Project:	LA-RICS Authority		
Name of Person or Agency Carrying Out Project:	LA-RICS Authority		
Exempt Status: Statutory Exemptions. Public Resources Code Section 21080.25. Categorical Exemptions. CEQA Guidelines Sections 15301, 15303, 15304.			Exempt
Reasons Why the Project Site	<p><u>Statutory Exemption Findings:</u></p> <p>(1) the site is publicly owned;</p> <p>(2) construction and implementation at the site would not have a substantial adverse impact on wetlands, riparian areas, or habitat of significant value, and would not harm any species protected by the federal Endangered Species Act of 1973 (16 U.S.C. There would be negligible to no expansion of use associated with this activity since the fiber for the leased circuit lines are dedicated to providing this type of connectivity. Leased circuit work would not include the removal of healthy, mature scenic trees and would not be located in a particularly sensitive environment, and there are no cumulative impacts, unusual circumstances, or other limiting factors that would make the categorical exemptions inapplicable based on the project records.</p>

Notice of Exemption (NOE)

Document Filed With: County Clerk County of Los Angeles 12400 Imperial Highway, Norwalk, CA 90650			
From (Public Agency):		Los Angeles Regional Interoperable Communications System (LA-RICS) Authority	
Project Title:	LA-RICS Public Safety Broadband Network (PSBN), also known as LA-RICS Long Term Evolution (LTE) System	Site Number:	LACF102
Facility Name:	Los Angeles County Fire Station 102	Facility Type:	Public Safety Entity
Project Description: (Technical Specifications)	Development of Site LACF102 will consist of an LTE facility with a new monopole, which shall not exceed 70 feet tall (without appurtenances and attachments), except to the extent it is possible to collocate antennas on existing towers and infrastructure, along with LTE communications and auxiliary equipment, appurtenant ground equipment (e.g. emergency generator, fuel tank, and utility conduits), and any off-site leased circuit work if needed, to support operation of the LTE facility as appropriate. The facility will be developed on previously disturbed land.		
Jurisdiction Location:	City of Claremont	County Location:	Los Angeles
Site Address:	2040 N. Sumner Avenue, Claremont, CA 91711		
LatitudeWGS84:		LongitudeWGS84:	
Description of Nature, Purpose, and Beneficiaries of Project:	The LA-RICS LTE System Project is a modern, wireless voice and data communications system that would support 34,000 public safety responders and protect Los Angeles County's 10 million residents and 26 million annual visitors. The LTE technology would provide day-to-day data communication service for individual public safety agencies in Los Angeles County; enable critical communications for emergency response and regional interoperability; give emergency responders high speed access to life-saving multimedia information; and support the National Broadband Initiative.		
Name of Public Agency Approving Project:	LA-RICS Authority		
Name of Person or Agency Carrying Out Project:	LA-RICS Authority		
Exempt Status: Statutory Exemptions. Public Resources Code Section 21080.25. Categorical Exemptions. CEQA Guidelines Sections 15301, 15303, 15304.			Exempt
Reasons Why the Project Site	<p><u>Statutory Exemption Findings:</u></p> <p>(1) the site is publicly owned;</p> <p>(2) construction and implementation at the site would not have a substantial adverse impact on wetlands, riparian areas, or habitat of significant value, and would not harm any species protected by the federal Endangered Species Act of 1973 (16 U.S.C. Sec. 1531 et seq), the Native Plant Protection Act (Chapter 10 (commencing with Section 1900) of the Fish and Game Code), or The California Endangered Species Act (Chapter 1.5 (commencing with Section 2050) of Division 3 of the Fish and Game Code), or the habitat of those species;</p> <p>(3) construction and implementation at the site would not have a substantial adverse impact on historical resources pursuant to Section 21084.1 of the Public Resources Code;</p> <p>(4) operation of the project at the site would not exceed the maximum permissible exposure standards established by the Federal Communications Commission, as set forth in Sections 1.1307 and 1.1310 of Title 47 of the Code of Federal Regulations;</p> <p>(5) the LTE antenna support structures would comply with applicable state and federal height restrictions, and any height restrictions mandated by an applicable comprehensive land use plan adopted by an airport land use commission. The new monopole does not exceed 70 feet in height without appurtenances and attachments;</p> <p>(6) each new central system switch is located within an existing enclosed structure at a publicly owned project site, or is housed at an existing private communications facility; and</p> <p>(7) the site is not located on a school site or sacred cultural site.</p> <p><u>Categorical Exemption Findings:</u></p> <p>To the extent some leased circuit work may need to occur outside of a PSBN site, such work would involve minor alteration of existing facilities, mechanical equipment, and location of new small facilities as well as minor alteration in the condition of land within the public right-of-way. There would be negligible to no expansion of use associated with this activity since the fiber for the leased circuit lines are dedicated to providing this type of connectivity. Leased circuit work would not include the removal of healthy, mature scenic trees and would not be located in a particularly sensitive environment, and there are no cumulative impacts, unusual circumstances, or other limiting factors that would make the categorical exemptions inapplicable based on the project records.</p>

The facility will be developed on previously disturbed land.		
Jurisdiction Location:	Unincorporated Los Angeles County	County Location:	Los Angeles
Site Address:	39939 N. 170 Street, East Lake Los Angeles, CA 93591		
LatitudeWGS84:		LongitudeWGS84:	
Description of Nature, Purpose, and Beneficiaries of Project:	The LA-RICS LTE System Project is a modern, wireless voice and data communications system that would support 34,000 public safety responders and protect Los Angeles County's 10 million residents and 26 million annual visitors. The LTE technology would provide day-to-day data communication service for individual public safety agencies in Los Angeles County; enable critical communications for emergency response and regional interoperability; give emergency responders high speed access to life-saving multimedia information; and support the National Broadband Initiative.		
Name of Public Agency Approving Project:	LA-RICS Authority		
Name of Person or Agency Carrying Out Project:	LA-RICS Authority		
Exempt Status: Statutory Exemptions. Public Resources Code Section 21080.25.			Exempt
Categorical Exemptions. CEQA Guidelines Sections 15301, 15303, 15304.			
Reasons Why the Project Site	<p>Statutory Exemption Findings:</p> <p>(1) the site is publicly owned;</p> <p>(2) construction and implementation at the site would not have a substantial adverse impact on wetlands, riparian areas, or habitat of significant value, and would not harm any species protected by the federal Endangered Species Act of 1973 (16 U.S.C. Sec. 1531 et seq), the Native Plant Protection Act (Chapter 10 (commencing with Section 1900) of the Fish and Game Code), or The California Endangered Species Act (Chapter 1.5 (commencing with Section 2050) of Division 3 of the Fish and Game Code), or the habitat of those species;</p> <p>(3) construction and implementation at the site would not have a substantial adverse impact on historical resources pursuant to Section 21084.1 of the Public Resources Code;</p> <p>(4) operation of the project at the site would not exceed the maximum permissible exposure standards established by the Federal Communications Commission, as set forth in Sections 1.1307 and 1.1310 of Title 47 of the Code of Federal Regulations;</p> <p>(5) the LTE antenna support structures would comply with applicable state and federal height restrictions, and any height restrictions mandated by an applicable comprehensive land use plan adopted by an airport land use commission. The new monopole does not exceed 70 feet in height without appurtenances and attachments;</p> <p>(6) each new central system switch is located within an existing enclosed structure at a publicly owned project site, or is housed at an existing private communications facility; and</p> <p>(7) the site is not located on a school site or sacred cultural site.</p> <p>Categorical Exemption Findings:</p> <p>To the extent some leased circuit work may need to occur outside of a PSBN site, such work would involve minor alteration of existing facilities, mechanical equipment, and location of new small facilities as well as minor alteration in the condition of land within the public right-of-way. There would be negligible to no expansion of use associated with this activity since the fiber for the leased circuit lines are dedicated to providing this type of connectivity. Leased circuit work would not include the removal of healthy, mature scenic trees and would not be located in a particularly sensitive environment, and there are no cumulative impacts, unusual circumstances, or other limiting factors that would make the categorical exemptions inapplicable based on the project records.</p>

Exempt Status: Statutory Exemptions. Public Resources Code Section 21080.25. Categorical Exemptions. CEQA Guidelines Sections 15301, 15303, 15304.			Exempt
Reasons Why the Project Site	<p><u>Statutory Exemption Findings:</u></p> <p>(1) the site is publicly owned;</p> <p>(2) construction and implementation at the site would not have a substantial adverse impact on wetlands, riparian areas, or habitat of significant value, and would not harm any species protected by the federal Endangered Species Act of 1973 (16 U.S.C. Sec. 1531 et seq), the Native Plant Protection Act (Chapter 10 (commencing with Section 1900) of the Fish and Game Code), or The California Endangered Species Act (Chapter 1.5 (commencing with Section 2050) of Division 3 of the Fish and Game Code), or the habitat of those species;</p> <p>(3) construction and implementation at the site would not have a substantial adverse impact on historical resources pursuant to Section 21084.1 of the Public Resources Code;</p> <p>(4) operation of the project at the site would not exceed the maximum permissible exposure standards established by the Federal Communications Commission, as set forth in Sections 1.1307 and 1.1310 of Title 47 of the Code of Federal Regulations;</p> <p>(5) the LTE antenna support structures would comply with applicable state and federal height restrictions, and any height restrictions mandated by an applicable comprehensive land use plan adopted by an airport land use commission. The new monopole does not exceed 70 feet in height without appurtenances and attachments;</p> <p>(6) each new central system switch is located within an existing enclosed structure at a publicly owned project site, or is housed at an existing private communications facility; and</p> <p>(7) the site is not located on a school site or sacred cultural site.</p> <p><u>Categorical Exemption Findings:</u></p> <p>To the extent some leased circuit work may need to occur outside of a PSBN site, such work would involve minor alteration of existing facilities, mechanical equipment, and location of new small facilities as well as minor alteration in the condition of land within the public right-of-way. There would be negligible to no expansion of use associated with this activity since the fiber for the leased circuit lines are dedicated to providing this type of connectivity. Leased circuit work would not include the removal of healthy, mature scenic trees and would not be located in a particularly sensitive environment, and there are no cumulative impacts, unusual circumstances, or other limiting factors that would make the categorical exemptions inapplicable based on the project records.</p>

REGISTRAR - RECORDER/COUNTY CLERK

Notice of Exemption (NOE)

Document Filed With: County Clerk County of Los Angeles 12400 Imperial Highway, Norwalk, CA 90650			
From (Public Agency):		Los Angeles Regional Interoperable Communications System (LA-RICS) Authority	
Project Title:	LA-RICS Public Safety Broadband Network (PSBN), also known as LA-RICS Long Term Evolution (LTE) System	Site Number:	LACF140
Facility Name:	Los Angeles County Fire Station 140	Facility Type:	Public Safety Entity
Project Description: (Technical Specifications)	Development of Site LACF140 will consist of an LTE facility with a new monopole, which shall not exceed 70 feet tall (without appurtenances and attachments), except to the extent it is possible to collocate antennas on existing towers and infrastructure, along with LTE communications and auxiliary equipment, appurtenant ground equipment (e.g. emergency generator, fuel tank, and utility conduits), and any off-site leased circuit work if needed, to support operation of the LTE facility as appropriate. The facility will be developed on previously disturbed land.		
Jurisdiction Location:	Unincorporated Los Angeles County	County Location:	Los Angeles
Site Address:	8723 Elizabeth Lake Road, Leona Valley, CA 93550		
LatitudeWGS84:		LongitudeWGS84:	
Description of Nature, Purpose, and Beneficiaries of Project:	The LA-RICS LTE System Project is a modern, wireless voice and data communications system that would support 34,000 public safety responders and protect Los Angeles County's 10 million residents and 26 million annual visitors. The LTE technology would provide day-to-day data communication service for individual public safety agencies in Los Angeles County; enable critical communications for emergency response and regional interoperability; give emergency responders high speed access to life-saving multimedia information; and support the National Broadband Initiative.

Reasons Why the Project Site	<p><u>Statutory Exemption Findings:</u></p> <p>(1) the site is publicly owned;</p> <p>(2) construction and implementation at the site would not have a substantial adverse impact on wetlands, riparian areas, or habitat of significant value, and would not harm any species protected by the federal Endangered Species Act of 1973 (16 U.S.C. Sec. 1531 et seq), the Native Plant Protection Act (Chapter 10 (commencing with Section 1900) of the Fish and Game Code), or The California Endangered Species Act (Chapter 1.5 (commencing with Section 2050) of Division 3 of the Fish and Game Code), or the habitat of those species;</p> <p>(3) construction and implementation at the site would not have a substantial adverse impact on historical resources pursuant to Section 21084.1 of the Public Resources Code;</p> <p>(4) operation of the project at the site would not exceed the maximum permissible exposure standards established by the Federal Communications Commission, as set forth in Sections 1.1307 and 1.1310 of Title 47 of the Code of Federal Regulations;</p> <p>(5) the LTE antenna support structures would comply with applicable state and federal height restrictions, and any height restrictions mandated by an applicable comprehensive land use plan adopted by an airport land use commission. The new monopole does not exceed 70 feet in height without appurtenances and attachments;</p> <p>(6) each new central system switch is located within an existing enclosed structure at a publicly owned project site, or is housed at an existing private communications facility; and</p> <p>(7) the site is not located on a school site or sacred cultural site.</p> <p><u>Categorical Exemption Findings:</u></p> <p>To the extent some leased circuit work may need to occur outside of a PSBN site, such work would involve minor alteration of existing facilities, mechanical equipment, and location of new small facilities as well as minor alteration in the condition of land within the public right-of-way. There would be negligible to no expansion of use associated with this activity since the fiber for the leased circuit lines are dedicated to providing this type of connectivity. Leased circuit work would not include the removal of healthy, mature scenic trees and would not be located in a particularly sensitive environment, and there are no cumulative impacts, unusual circumstances, or other limiting factors that would make the categorical exemptions inapplicable based on the project records.</p>

REGISTRAR-RECORDER/COUNTY CLERK

Notice of Exemption (NOE)

Document Filed With: County Clerk County of Los Angeles 12400 Imperial Highway, Norwalk, CA 90650			
From (Public Agency):		Los Angeles Regional Interoperable Communications System (LA-RICS) Authority	
Project Title:	LA-RICS Public Safety Broadband Network (PSBN), also known as LA-RICS Long Term Evolution (LTE) System	Site Number:	LACF153
Facility Name:	Los Angeles County Fire Station153	Facility Type:	Public Safety Entity
Project Description: (Technical Specifications)	Development of Site LACF153 will consist of an LTE facility with a new monopole, which shall not exceed 70 feet tall (without appurtenances and attachments), except to the extent it is possible to collocate antennas on existing towers and infrastructure, along with LTE communications and auxiliary equipment, appurtenant ground equipment (e.g. emergency generator, fuel tank, and utility conduits), and any off-site leased circuit work if needed, to support operation of the LTE facility as appropriate. The facility will be developed on previously disturbed land.		
Jurisdiction Location:	City of Covina	County Location:	Los Angeles
Site Address:	1577 E. Cypress Street, Covina, CA 91723		
LatitudeWGS84:		LongitudeWGS84:	
Description of Nature, Purpose, and Beneficiaries of Project:	The LA-RICS LTE System Project is a modern, wireless voice and data communications system that would support 34,000 public safety responders and protect Los Angeles County's 10 million residents and 26 million annual visitors. The LTE technology would provide day-to-day data communication service for individual public safety agencies in Los Angeles County; enable critical communications for emergency response and regional interoperability; give emergency responders high speed access to life-saving multimedia information; and support the National Broadband Initiative.		
Name of Public Agency Approving Project:	LA-RICS Authority		
Name of Person or Agency Carrying Out Project:	LA-RICS Authority		
Exempt Status: Statutory Exemptions. Public Resources Code Section 21080.25. Categorical Exemptions. CEQA Guidelines Sections 15301, 15303, 15304.			Exempt
Reasons Why	<p><u>Statutory Exemption Findings:</u></p> <p>(1) the site is publicly owned;</p> <p>(2) construction and implementation at the site would not have a substantial adverse impact on wetlands, riparian areas, or habitat of significant value, and would not harm any species protected by the federal Endangered Species Act of 1973 (16 U.S.C. Notice of Exemption (NOE)

Document Filed With: County Clerk County of Los Angeles 12400 Imperial Highway, Norwalk, CA 90650			
From (Public Agency):		Los Angeles Regional Interoperable Communications System (LA-RICS) Authority	
Project Title:	LA-RICS Public Safety Broadband Network (PSBN), also known as LA-RICS Long Term Evolution (LTE) System	Site Number:	LACF163
Facility Name:	Los Angeles County Fire Station 163	Facility Type:	Public Safety Entity
Project Description: (Technical Specifications)	Development of Site LACF163 will consist of an LTE facility with a new monopole, which shall not exceed 70 feet tall (without appurtenances and attachments), except to the extent it is possible to collocate antennas on existing towers and infrastructure, along with LTE communications and auxiliary equipment, appurtenant ground equipment (e.g. emergency generator, fuel tank, and utility conduits), and any off-site leased circuit work if needed, to support operation of the LTE facility as appropriate. The facility will be developed on previously disturbed land.		
Jurisdiction Location:	City of Bell	County Location:	Los Angeles
Site Address:	6320 Pine Avenue, Bell, CA 90201		
LatitudeWGS84:		LongitudeWGS84:	
Description of Nature, Purpose, and Beneficiaries of Project:	The LA-RICS LTE System Project is a modern, wireless voice and data communications system that would support 34,000 public safety responders and protect Los Angeles County's 10 million residents and 26 million annual visitors. The LTE technology would provide day-to-day data communication service for individual public safety agencies in Los Angeles County; enable critical communications for emergency response and regional interoperability; give emergency responders high speed access to life-saving multimedia information; and support the National Broadband Initiative.		
Name of Public Agency Approving Project:	LA-RICS Authority		
Name of Person or Agency Carrying Out Project:	LA-RICS Authority		
Exempt Status: Statutory Exemptions. Public Resources Code Section 21080.25. Categorical Exemptions. CEQA Guidelines Sections 15301, 15303, 15304.			Exempt
Reasons Why	<p><u>Statutory Exemption Findings:</u></p> <p>(1) the site is publicly owned;</p> <p>(2) construction and implementation at the site would not have a substantial adverse impact on wetlands, riparian areas, or habitat of significant value, and would not harm any species protected by the federal Endangered Species Act of 1973 (16 U.S.C. Sec. 1531 et seq), the Native Plant Protection Act (Chapter 10 (commencing with Section 1900) of the Fish and Game Code), or The California Endangered Species Act (Chapter 1.5 (commencing with Section 2050) of Division 3 of the Fish and Game Code), or the habitat of those species;</p> <p>(3) construction and implementation at the site would not have a substantial adverse impact on historical resources pursuant to Section 21084.1 of the Public Resources Code;</p> <p>(4) operation of the project at the site would not exceed the maximum permissible exposure standards established by the Federal Communications Commission, as set forth in Sections 1.1307 and 1.1310 of Title 47 of the Code of Federal Regulations;</p> <p>(5) the LTE antenna support structures would comply with applicable state and federal height restrictions, and any height restrictions mandated by an applicable comprehensive land use plan adopted by an airport land use commission. The new monopole does not exceed 70 feet in height without appurtenances and attachments;</p> <p>(6) each new central system switch is located within an existing enclosed structure at a publicly owned project site, or is housed at an existing private communications facility; and</p> <p>(7) the site is not located on a school site or sacred cultural site.</p> <p><u>Categorical Exemption Findings:</u></p> <p>To the extent some leased circuit work may need to occur outside of a PSBN site, such work would involve minor alteration of existing facilities, mechanical equipment, and location of new small facilities as well as minor alteration in the condition of land within the public right-of-way. There would be negligible to no expansion of use associated with this activity since the fiber for the leased circuit lines are dedicated to providing this type of connectivity. Notice of Exemption (NOE)

Document Filed With: County Clerk County of Los Angeles 12400 Imperial Highway, Norwalk, CA 90650			
From (Public Agency):		Los Angeles Regional Interoperable Communications System (LA-RICS) Authority	
Project Title:	LA-RICS Public Safety Broadband Network (PSBN), also known as LA-RICS Long Term Evolution (LTE) System	Site Number:	LACF169
Facility Name:	Los Angeles County Fire Station 169	Facility Type:	Public Safety Entity
Project Description: (Technical Specifications)	Development of Site LACF169 will consist of an LTE facility with a new monopole, which shall not exceed 70 feet tall (without appurtenances and attachments), except to the extent it is possible to collocate antennas on existing towers and infrastructure, along with LTE communications and auxiliary equipment, appurtenant ground equipment (e.g. emergency generator, fuel tank, and utility conduits), and any off-site leased circuit work if needed, to support operation of the LTE facility as appropriate. The facility will be developed on previously disturbed land.		
Jurisdiction Location:	City of El Monte	County Location:	Los Angeles
Site Address:	5112 N. Peck Road, El Monte, CA 91732		
LatitudeWGS84:		LongitudeWGS84:	
Description of Nature, Purpose, and Beneficiaries of Project:	The LA-RICS LTE System Project is a modern, wireless voice and data communications system that would support 34,000 public safety responders and protect Los Angeles County's 10 million residents and 26 million annual visitors. The LTE technology would provide day-to-day data communication service for individual public safety agencies in Los Angeles County; enable critical communications for emergency response and regional interoperability; give emergency responders high speed access to life-saving multimedia information; and support the National Broadband Initiative.		
Name of Public Agency Approving Project:	LA-RICS Authority		
Name of Person or Agency Carrying Out Project:	LA-RICS Authority		
Exempt Status: Statutory Exemptions. Public Resources Code Section 21080.25. Categorical Exemptions. CEQA Guidelines Sections 15301, 15303, 15304.			Exempt

Reasons Why

Statutory Exemption Findings:
 (1) the site is publicly owned;
 (2) construction and implementation at the site would not have a substantial adverse impact on wetlands, riparian areas, or habitat of significant value, and would not harm any species protected by the federal Endangered Species Act of 1973 (16 U.S.C. Sec. 1531 et seq), the Native Plant Protection Act (Chapter 10 (commencing with Section 1900) of the Fish and Game Code), or The California Endangered Species Act (Chapter 1.5 (commencing with Section 2050) of Division 3 of the Fish and Game Code), or the habitat of those species;
 (3) construction and implementation at the site would not have a substantial adverse impact on historical resources pursuant to Section 21084.1 of the Public Resources Code;
 (4) operation of the project at the site would not exceed the maximum permissible exposure standards established by the Federal Communications Commission, as set forth in Sections 1.1307 and 1.1310 of Title 47 of the Code of Federal Regulations;
 (5) the LTE antenna support structures would comply with applicable state and federal height restrictions, and any height restrictions mandated by an applicable comprehensive land use plan adopted by an airport land use commission. The new monopole does not exceed 70 feet in height without appurtenances and attachments;
 (6) each new central system switch is located within an existing enclosed structure at a publicly owned project site, or is housed at an existing private communications facility; and
 (7) the site is not located on a school site or sacred cultural site.
Categorical Exemption Findings:
 To the extent some leased circuit work may need to occur outside of a PSBN site, such work would involve minor alteration of existing facilities, mechanical equipment, and location of new small facilities as well as minor alteration in the condition of land within the public right-of-way. There would be negligible to no expansion of use associated with this activity since the fiber for the leased circuit lines are dedicated to providing this type of connectivity. Leased circuit work would not include the removal of healthy, mature scenic trees and would not be located in a particularly sensitive environment, and there are no cumulative impacts, unusual circumstances, or other limiting factors that would make the categorical exemptions inapplicable based on the project records.

From (Public Agency):		Los Angeles Regional Interoperable Communications System (LA-RICS) Authority	
Project Title:	LA-RICS Public Safety Broadband Network (PSBN), also known as LA-RICS Long Term Evolution (LTE) System	Site Number:	LACF183
Facility Name:	Los Angeles County Fire Station 183	Facility Type:	Public Safety Entity
Project Description: (Technical Specifications)	Development of Site LACF183 will consist of an LTE facility with a new monopole, which shall not exceed 70 feet tall (without appurtenances and attachments), except to the extent it is possible to collocate antennas on existing towers and infrastructure, along with LTE communications and auxiliary equipment, appurtenant ground equipment (e.g. emergency generator, fuel tank, and utility conduits), and any off-site leased circuit work if needed, to support operation of the LTE facility as appropriate. The facility will be developed on previously disturbed land.		
Jurisdiction Location:	City of Pomona	County Location:	Los Angeles
Site Address:	708 N. San Antonio, Pomona, CA 91767		
LatitudeWGS84:		LongitudeWGS84:	
Description of Nature, Purpose, and Beneficiaries of Project:	The LA-RICS LTE System Project is a modern, wireless voice and data communications system that would support 34,000 public safety responders and protect Los Angeles County's 10 million residents and 26 million annual visitors. The LTE technology would provide day-to-day data communication service for individual public safety agencies in Los Angeles County; enable critical communications for emergency response and regional interoperability; give emergency responders high speed access to life-saving multimedia information; and support the National Broadband Initiative.		
Name of Public Agency Approving Project:	LA-RICS Authority		
Name of Person or Agency Carrying Out Project:	LA-RICS Authority		
Exempt Status: Statutory Exemptions. Public Resources Code Section 21080.25. Categorical Exemptions. CEQA Guidelines Sections 15301, 15303, 15304.			Exempt
Reasons Why	<p><u>Statutory Exemption Findings:</u></p> <p>(1) the site is publicly owned;</p> <p>(2) construction and implementation at the site would not have a substantial adverse impact on wetlands, riparian areas, or habitat of significant value, and would not harm any species protected by the federal Endangered Species Act of 1973 (16 U.S.C. Sec. 1531 et seq), the Native Plant Protection Act (Chapter 10 (commencing with Section 1900) of the Fish and Game Code), or The California Endangered Species Act (Chapter 1.5 (commencing with Section 2050) of Division 3 of the Fish and Game Code), or the habitat of those species;</p> <p>(3) construction and implementation at the site would not have a substantial adverse impact on historical resources pursuant to Section 21084.1 of the Public Resources Code;</p> <p>(4) operation of the project at the site would not exceed the maximum permissible exposure standards established by the Federal Communications Commission, as set forth in Sections 1.1307 and 1.1310 of Title 47 of the Code of Federal Regulations;</p> <p>(5) the LTE antenna support structures would comply with applicable state and federal height restrictions, and any height restrictions mandated by an applicable comprehensive land use plan adopted by an airport land use commission. The new monopole does not exceed 70 feet in height without appurtenances and attachments;</p> <p>(6) each new central system switch is located within an existing enclosed structure at a publicly owned project site, or is housed at an existing private communications facility; and</p> <p>(7) the site is not located on a school site or sacred cultural site.</p> <p><u>Categorical Exemption Findings:</u></p> <p>To the extent some leased circuit work may need to occur outside of a PSBN site, such work would involve minor alteration of existing facilities, mechanical equipment, and location of new small facilities as well as minor alteration in the condition of land within the public right-of-way. There would be negligible to no expansion of use associated with this activity since the fiber for the leased circuit lines are dedicated to providing this type of connectivity. Leased circuit work would not include the removal of healthy, mature scenic trees and would not be located in a particularly sensitive environment, and there are no cumulative impacts, unusual circumstances, or other limiting factors that would make the categorical exemptions inapplicable based on the project records.</p>

Name of Person or Agency Carrying Out Project:	LA-RICS Authority		
Exempt Status: Statutory Exemptions. Public Resources Code Section 21080.25. Categorical Exemptions. CEQA Guidelines Sections 15301, 15303, 15304.			Exempt
Reasons Why	<p><u>Statutory Exemption Findings:</u></p> <p>(1) the site is publicly owned;</p> <p>(2) construction and implementation at the site would not have a substantial adverse impact on wetlands, riparian areas, or habitat of significant value, and would not harm any species protected by the federal Endangered Species Act of 1973 (16 U.S.C. Sec. 1531 et seq), the Native Plant Protection Act (Chapter 10 (commencing with Section 1900) of the Fish and Game Code), or The California Endangered Species Act (Chapter 1.5 (commencing with Section 2050) of Division 3 of the Fish and Game Code), or the habitat of those species;</p> <p>(3) construction and implementation at the site would not have a substantial adverse impact on historical resources pursuant to Section 21084.1 of the Public Resources Code;</p> <p>(4) operation of the project at the site would not exceed the maximum permissible exposure standards established by the Federal Communications Commission, as set forth in Sections 1.1307 and 1.1310 of Title 47 of the Code of Federal Regulations;</p> <p>(5) the LTE antenna support structures would comply with applicable state and federal height restrictions, and any height restrictions mandated by an applicable comprehensive land use plan adopted by an airport land use commission. The new monopole does not exceed 70 feet in height without appurtenances and attachments;</p> <p>(6) each new central system switch is located within an existing enclosed structure at a publicly owned project site, or is housed at an existing private communications facility; and</p> <p>(7) the site is not located on a school site or sacred cultural site.</p> <p><u>Categorical Exemption Findings:</u></p> <p>To the extent some leased circuit work may need to occur outside of a PSBN site, such work would involve minor alteration of existing facilities, mechanical equipment, and location of new small facilities as well as minor alteration in the condition of land within the public right-of-way. There would be negligible to no expansion of use associated with this activity since the fiber for the leased circuit lines are dedicated to providing this type of connectivity. Leased circuit work would not include the removal of healthy, mature scenic trees and would not be located in a particularly sensitive environment, and there are no cumulative impacts, unusual circumstances, or other limiting factors that would make the categorical exemptions inapplicable based on the project records.</p>

Notice of Exemption (NOE)

Document Filed With: County Clerk County of Los Angeles 12400 Imperial Highway, Norwalk, CA 90650			
From (Public Agency):		Los Angeles Regional Interoperable Communications System (LA-RICS) Authority	
Project Title:	LA-RICS Public Safety Broadband Network (PSBN), also known as LA-RICS Long Term Evolution (LTE) System	Site Number:	LACFCP09
Facility Name:	Los Angeles County Fire Department Camp 9	Facility Type:	Public Safety Entity
Project Description: (Technical Specifications)	Development of Site LACFCP09 will consist of an LTE facility with a new monopole, which shall not exceed 70 feet tall (without appurtenances and attachments), except to the extent it is possible to collocate antennas on existing towers and infrastructure, along with LTE communications and auxiliary equipment, appurtenant ground equipment (e.g. emergency generator, fuel tank, and utility conduits), and any off-site leased circuit work if needed, to support operation of the LTE facility as appropriate. The facility will be developed on previously disturbed land.		
Jurisdiction Location:	Unincorporated Los Angeles County	County Location:	Los Angeles
Site Address:	21521 N. Sand Canyon Road, Santa Clarita, CA 91350		
LatitudeWGS84:		LongitudeWGS84:	
Description of Nature, Purpose, and Beneficiaries of Project:	The LA-RICS LTE System Project is a modern, wireless voice and data communications system that would support 34,000 public safety responders and protect Los Angeles County's 10 million residents and 26 million annual visitors. The LTE technology would provide day-to-day data communication service for individual public safety agencies in Los Angeles County; enable critical communications for emergency response and regional interoperability; give emergency responders high speed access to life-saving multimedia information; and support the National Broadband Initiative.

Notice of Exemption (NOE)

Document Filed With: County Clerk County of Los Angeles 12400 Imperial Highway, Norwalk, CA 90650			
From (Public Agency):		Los Angeles Regional Interoperable Communications System (LA-RICS) Authority	
Project Title:	LA-RICS Public Safety Broadband Network (PSBN), also known as LA-RICS Long Term Evolution (LTE) System	Site Number:	LAFD019
Facility Name:	Los Angeles Fire Station 019	Facility Type:	Public Safety Entity
Project Description: (Technical Specifications)	Development of Site LAFD019 will consist of an LTE facility with a new monopole, which shall not exceed 70 feet tall (without appurtenances and attachments), except to the extent it is possible to collocate antennas on existing towers and infrastructure, along with LTE communications and auxiliary equipment, appurtenant ground equipment (e.g. emergency generator, fuel tank, and utility conduits), and any off-site leased circuit work if needed, to support operation of the LTE facility as appropriate. The facility will be developed on previously disturbed land.		
Jurisdiction Location:	City of Los Angeles	County Location:	Los Angeles
Site Address:	12229 Sunset Boulevard, Brentwood, CA 90049		
LatitudeWGS84:		LongitudeWGS84:	
Description of Nature, Purpose, and Beneficiaries of Project:	The LA-RICS LTE System Project is a modern, wireless voice and data communications system that would support 34,000 public safety responders and protect Los Angeles County's 10 million residents and 26 million annual visitors. The LTE technology would provide day-to-day data communication service for individual public safety agencies in Los Angeles County; enable critical communications for emergency response and regional interoperability; give emergency responders high speed access to life-saving multimedia information; and support the National Broadband Initiative.		
Name of Public Agency Approving Project:	LA-RICS Authority		
Name of Person or Agency Carrying Out Project:	LA-RICS Authority		
Exempt Status: Statutory Exemptions. Public Resources Code Section 21080.25. Categorical Exemptions. CEQA Guidelines Sections 15301, 15303, 15304.			Exempt
Reasons Why	<p><u>Statutory Exemption Findings:</u></p> <p>(1) the site is publicly owned;</p> <p>(2) construction and implementation at the site would not have a substantial adverse impact on wetlands, riparian areas, or habitat of significant value, and would not harm any species protected by the federal Endangered Species Act of 1973 (16 U.S.C. Sec. 1531 et seq), the Native Plant Protection Act (Chapter 10 (commencing with Section 1900) of the Fish and Game Code), or The California Endangered Species Act (Chapter 1.5 (commencing with Section 2050) of Division 3 of the Fish and Game Code), or the habitat of those species;</p> <p>(3) construction and implementation at the site would not have a substantial adverse impact on historical resources pursuant to Section 21084.1 of the Public Resources Code;</p> <p>(4) operation of the project at the site would not exceed the maximum permissible exposure standards established by the Federal Communications Commission, as set forth in Sections 1.1307 and 1.1310 of Title 47 of the Code of Federal Regulations;</p> <p>(5) the LTE antenna support structures would comply with applicable state and federal height restrictions, and any height restrictions mandated by an applicable comprehensive land use plan adopted by an airport land use commission. The new monopole does not exceed 70 feet in height without appurtenances and attachments;</p> <p>(6) each new central system switch is located within an existing enclosed structure at a publicly owned project site, or is housed at an existing private communications facility; and</p> <p>(7) the site is not located on a school site or sacred cultural site.</p> <p><u>Categorical Exemption Findings:</u></p> <p>To the extent some leased circuit work may need to occur outside of a PSBN site, such work would involve minor alteration of existing facilities, mechanical equipment, and location of new small facilities as well as minor alteration in the condition of land within the public right-of-way. There would be negligible to no expansion of use associated with this activity since the fiber for the leased circuit lines are dedicated to providing this type of connectivity. REGISTRAR - RECORDER/COUNTY CLERK

Notice of Exemption (NOE)

Document Filed With: County Clerk County of Los Angeles 12400 Imperial Highway, Norwalk, CA 90650			
From (Public Agency):		Los Angeles Regional Interoperable Communications System (LA-RICS) Authority	
Project Title:	LA-RICS Public Safety Broadband Network (PSBN), also known as LA-RICS Long Term Evolution (LTE) System	Site Number:	LAFD035
Facility Name:	Los Angeles Fire Station 035	Facility Type:	Public Safety Entity
Project Description: (Technical Specifications)	Development of Site LAFD035 will consist of an LTE facility with a new monopole, which shall not exceed 70 feet tall (without appurtenances and attachments), except to the extent it is possible to collocate antennas on existing towers and infrastructure, along with LTE communications and auxiliary equipment, appurtenant ground equipment (e.g. emergency generator, fuel tank, and utility conduits), and any off-site leased circuit work if needed, to support operation of the LTE facility as appropriate. The facility will be developed on previously disturbed land.		
Jurisdiction Location:	City of Los Angeles	County Location:	Los Angeles
Site Address:	1601 N. Hillhurst Avenue, Hollywood, CA 90027		
LatitudeWGS84:		LongitudeWGS84:	
Description of Nature, Purpose, and Beneficiaries of Project:	The LA-RICS LTE System Project is a modern, wireless voice and data communications system that would support 34,000 public safety responders and protect Los Angeles County's 10 million residents and 26 million annual visitors. The LTE technology would provide day-to-day data communication service for individual public safety agencies in Los Angeles County; enable critical communications for emergency response and regional interoperability; give emergency responders high speed access to life-saving multimedia information; and support the National Broadband Initiative.		
Name of Public Agency Approving Project:	LA-RICS Authority		
Name of Person or Agency Carrying Out Project:	LA-RICS Authority		
Exempt Status: Statutory Exemptions. Public Resources Code Section 21080.25. Categorical Exemptions. CEQA Guidelines Sections 15301, 15303, 15304.			Exempt

Reasons Why the Project Site

Statutory Exemption Findings:
 (1) the site is publicly owned;
 (2) construction and implementation at the site would not have a substantial adverse impact on wetlands, riparian areas, or habitat of significant value, and would not harm any species protected by the federal Endangered Species Act of 1973 (16 U.S.C. Sec. 1531 et seq), the Native Plant Protection Act (Chapter 10 (commencing with Section 1900) of the Fish and Game Code), or The California Endangered Species Act (Chapter 1.5 (commencing with Section 2050) of Division 3 of the Fish and Game Code), or the habitat of those species;
 (3) construction and implementation at the site would not have a substantial adverse impact on historical resources pursuant to Section 21084.1 of the Public Resources Code;
 (4) operation of the project at the site would not exceed the maximum permissible exposure standards established by the Federal Communications Commission, as set forth in Sections 1.1307 and 1.1310 of Title 47 of the Code of Federal Regulations;
 (5) the LTE antenna support structures would comply with applicable state and federal height restrictions, and any height restrictions mandated by an applicable comprehensive land use plan adopted by an airport land use commission. The new monopole does not exceed 70 feet in height without appurtenances and attachments;
 (6) each new central system switch is located within an existing enclosed structure at a publicly owned project site, or is housed at an existing private communications facility; and
 (7) the site is not located on a school site or sacred cultural site.

Categorical Exemption Findings:
 To the extent some leased circuit work may need to occur outside of a PSBN site, such work would involve minor alteration of existing facilities, mechanical equipment, and location of new small facilities as well as minor alteration in the condition of land within the public right-of-way. There would be negligible to no expansion of use associated with this activity since the fiber for the leased circuit lines are dedicated to providing this type of connectivity. Leased circuit work would not include the removal of healthy, mature scenic trees and would not be located in a particularly sensitive environment, and there are no cumulative impacts, unusual circumstances, or other limiting factors that would make the categorical exemptions inapplicable based on the project records.

There would be negligible to no expansion of use associated with this activity since the fiber for the leased circuit lines are dedicated to providing this type of connectivity. Leased circuit work would not include the removal of healthy, mature scenic trees and would not be located in a particularly sensitive environment, and there are no cumulative impacts, unusual circumstances, or other limiting factors that would make the categorical exemptions inapplicable based on the project records.</p>

REGISTRAR - RECORDER/COUNTY CLERK

Notice of Exemption (NOE)

Document Filed With: County Clerk County of Los Angeles 12400 Imperial Highway, Norwalk, CA 90650			
From (Public Agency):		Los Angeles Regional Interoperable Communications System (LA-RICS) Authority	
Project Title:	LA-RICS Public Safety Broadband Network (PSBN), also known as LA-RICS Long Term Evolution (LTE) System	Site Number:	LAFD049
Facility Name:	Los Angeles Fire Station 049	Facility Type:	Public Safety Entity
Project Description: (Technical Specifications)	Development of Site LAFD049 will consist of an LTE facility with a new monopole, which shall not exceed 70 feet tall (without appurtenances and attachments), except to the extent it is possible to collocate antennas on existing towers and infrastructure, along with LTE communications and auxiliary equipment, appurtenant ground equipment (e.g. emergency generator, fuel tank, and utility conduits), and any off-site leased circuit work if needed, to support operation of the LTE facility as appropriate. The facility will be developed on previously disturbed land.		
Jurisdiction Location:	City of Los Angeles	County Location:	Los Angeles
Site Address:	400 Yacht Street (Boat), Wilmington, CA 90744		
LatitudeWGS84:		LongitudeWGS84:	
Description of Nature, Purpose, and Beneficiaries of Project:	The LA-RICS LTE System Project is a modern, wireless voice and data communications system that would support 34,000 public safety responders and protect Los Angeles County's 10 million residents and 26 million annual visitors. The LTE technology would provide day-to-day data communication service for individual public safety agencies in Los Angeles County; enable critical communications for emergency response and regional interoperability; give emergency responders high speed access to life-saving multimedia information; and support the National Broadband Initiative.		
Name of Public Agency Approving Project:	LA-RICS Authority		
Name of Person or Agency Carrying Out Project:	LA-RICS Authority		
Exempt Status: Statutory Exemptions. Public Resources Code Section 21080.25. Categorical Exemptions. CEQA Guidelines Sections 15301, 15303, 15304.			Exempt
Reasons Why	<p><u>Statutory Exemption Findings:</u></p> <p>(1) the site is publicly owned;</p> <p>(2) construction and implementation at the site would not have a substantial adverse impact on wetlands, riparian areas, or habitat of significant value, and would not harm any species protected by the federal Endangered Species Act of 1973 (16 U.S.C. Sec. 1531 et seq), the Native Plant Protection Act (Chapter 10 (commencing with Section 1900) of the Fish and Game Code), or The California Endangered Species Act (Chapter 1.5 (commencing with Section 2050) of Division 3 of the Fish and Game Code), or the habitat of those species;</p> <p>(3) construction and implementation at the site would not have a substantial adverse impact on historical resources pursuant to Section 21084.1 of the Public Resources Code;</p> <p>(4) operation of the project at the site would not exceed the maximum permissible exposure standards established by the Federal Communications Commission, as set forth in Sections 1.1307 and 1.1310 of Title 47 of the Code of Federal Regulations;</p> <p>(5) the LTE antenna support structures would comply with applicable state and federal height restrictions, and any height restrictions mandated by an applicable comprehensive land use plan adopted by an airport land use commission. The new monopole does not exceed 70 feet in height without appurtenances and attachments;</p> <p>(6) each new central system switch is located within an existing enclosed structure at a publicly owned project site, or is housed at an existing private communications facility; and</p> <p>(7) the site is not located on a school site or sacred cultural site.</p> <p><u>Categorical Exemption Findings:</u></p> <p>To the extent some leased circuit work may need to occur outside of a PSBN site, such work would involve minor alteration of existing facilities, mechanical equipment, and location of new small facilities as well as minor alteration in the condition of land within the public right-of-way. There would be negligible to no expansion of use associated with this activity since the fiber for the leased circuit lines are dedicated to providing this type of connectivity. Leased circuit work would not include the removal of healthy, mature scenic trees and would not be located in a particularly sensitive environment, and there are no cumulative impacts, unusual circumstances, or other limiting factors that would make the categorical exemptions inapplicable based on the project records.</p>

Project Title:	LA-RICS Public Safety Broadband Network (PSBN), also known as LA-RICS Long Term Evolution (LTE) System	Site Number:	LAFD077
Facility Name:	Los Angeles Fire Station 077	Facility Type:	Public Safety Entity
Project Description: (Technical Specifications)	Development of Site LAFD077 will consist of an LTE facility with a new monopole, which shall not exceed 70 feet tall (without appurtenances and attachments), except to the extent it is possible to collocate antennas on existing towers and infrastructure, along with LTE communications and auxiliary equipment, appurtenant ground equipment (e.g. emergency generator, fuel tank, and utility conduits), and any off-site leased circuit work if needed, to support operation of the LTE facility as appropriate. The facility will be developed on previously disturbed land.		
Jurisdiction Location:	City of Los Angeles	County Location:	Los Angeles
Site Address:	9224 Sunland Boulevard, Sun Valley, CA 91352		
LatitudeWGS84:		LongitudeWGS84:	
Description of Nature, Purpose, and Beneficiaries of Project:	The LA-RICS LTE System Project is a modern, wireless voice and data communications system that would support 34,000 public safety responders and protect Los Angeles County's 10 million residents and 26 million annual visitors. The LTE technology would provide day-to-day data communication service for individual public safety agencies in Los Angeles County; enable critical communications for emergency response and regional interoperability; give emergency responders high speed access to life-saving multimedia information; and support the National Broadband Initiative.		
Name of Public Agency Approving Project:	LA-RICS Authority		
Name of Person or Agency Carrying Out Project:	LA-RICS Authority		
Exempt Status: Statutory Exemptions. Public Resources Code Section 21080.25. Categorical Exemptions. CEQA Guidelines Sections 15301, 15303, 15304.			Exempt
Reasons Why t Site	<p><u>Statutory Exemption Findings:</u></p> <p>(1) the site is publicly owned;</p> <p>(2) construction and implementation at the site would not have a substantial adverse impact on wetlands, riparian areas, or habitat of significant value, and would not harm any species protected by the federal Endangered Species Act of 1973 (16 U.S.C. Sec. 1531 et seq), the Native Plant Protection Act (Chapter 10 (commencing with Section 1900) of the Fish and Game Code), or The California Endangered Species Act (Chapter 1.5 (commencing with Section 2050) of Division 3 of the Fish and Game Code), or the habitat of those species;</p> <p>(3) construction and implementation at the site would not have a substantial adverse impact on historical resources pursuant to Section 21084.1 of the Public Resources Code;</p> <p>(4) operation of the project at the site would not exceed the maximum permissible exposure standards established by the Federal Communications Commission, as set forth in Sections 1.1307 and 1.1310 of Title 47 of the Code of Federal Regulations;</p> <p>(5) the LTE antenna support structures would comply with applicable state and federal height restrictions, and any height restrictions mandated by an applicable comprehensive land use plan adopted by an airport land use commission. The new monopole does not exceed 70 feet in height without appurtenances and attachments;</p> <p>(6) each new central system switch is located within an existing enclosed structure at a publicly owned project site, or is housed at an existing private communications facility; and</p> <p>(7) the site is not located on a school site or sacred cultural site.</p> <p><u>Categorical Exemption Findings:</u></p> <p>To the extent some leased circuit work may need to occur outside of a PSBN site, such work would involve minor alteration of existing facilities, mechanical equipment, and location of new small facilities as well as minor alteration in the condition of land within the public right-of-way. There would be negligible to no expansion of use associated with this activity since the fiber for the leased circuit lines are dedicated to providing this type of connectivity. Leased circuit work would not include the removal of healthy, mature scenic trees and would not be located in a particularly sensitive environment, and there are no cumulative impacts, unusual circumstances, or other limiting factors that would make the categorical exemptions inapplicable based on the project records.</p>

Notice of Exemption (NOE)

Document Filed With: County Clerk County of Los Angeles 12400 Imperial Highway, Norwalk, CA 90650			
From (Public Agency):		Los Angeles Regional Interoperable Communications System (LA-RICS) Authority	
Project Title:	LA-RICS Public Safety Broadband Network (PSBN), also known as LA-RICS Long Term Evolution (LTE) System	Site Number:	LAFD088
Facility Name:	Los Angeles Fire Station 088	Facility Type:	Public Safety Entity
Project Description: (Technical Specifications)	Development of Site LAFD088 will consist of an LTE facility with a new monopole, which shall not exceed 70 feet tall (without appurtenances and attachments), except to the extent it is possible to collocate antennas on existing towers and infrastructure, along with LTE communications and auxiliary equipment, appurtenant ground equipment (e.g. emergency generator, fuel tank, and utility conduits), and any off-site leased circuit work if needed, to support operation of the LTE facility as appropriate. The facility will be developed on previously disturbed land.		
Jurisdiction Location:	City of Los Angeles	County Location:	Los Angeles
Site Address:	5101 N. Sepulveda Boulevard, Sherman Oaks, CA 91403		
LatitudeWGS84:		LongitudeWGS84:	
Description of Nature, Purpose, and Beneficiaries of Project:	The LA-RICS LTE System Project is a modern, wireless voice and data communications system that would support 34,000 public safety responders and protect Los Angeles County's 10 million residents and 26 million annual visitors. The LTE technology would provide day-to-day data communication service for individual public safety agencies in Los Angeles County; enable critical communications for emergency response and regional interoperability; give emergency responders high speed access to life-saving multimedia information; and support the National Broadband Initiative.		
Name of Public Agency Approving Project:	LA-RICS Authority		
Name of Person or Agency Carrying Out Project:	LA-RICS Authority		
Exempt Status: Statutory Exemptions. Public Resources Code Section 21080.25. Categorical Exemptions. CEQA Guidelines Sections 15301, 15303, 15304.			Exempt
Reasons Why the Project Site	<p><u>Statutory Exemption Findings:</u></p> <p>(1) the site is publicly owned;</p> <p>(2) construction and implementation at the site would not have a substantial adverse impact on wetlands, riparian areas, or habitat of significant value, and would not harm any species protected by the federal Endangered Species Act of 1973 (16 U.S.C. Reasons Why	<p><u>Statutory Exemption Findings:</u></p> <p>(1) the site is publicly owned;</p> <p>(2) construction and implementation at the site would not have a substantial adverse impact on wetlands, riparian areas, or habitat of significant value, and would not harm any species protected by the federal Endangered Species Act of 1973 (16 U.S.C. Sec. 1531 et seq), the Native Plant Protection Act (Chapter 10 (commencing with Section 1900) of the Fish and Game Code), or The California Endangered Species Act (Chapter 1.5 (commencing with Section 2050) of Division 3 of the Fish and Game Code), or the habitat of those species;</p> <p>(3) construction and implementation at the site would not have a substantial adverse impact on historical resources pursuant to Section 21084.1 of the Public Resources Code;</p> <p>(4) operation of the project at the site would not exceed the maximum permissible exposure standards established by the Federal Communications Commission, as set forth in Sections 1.1307 and 1.1310 of Title 47 of the Code of Federal Regulations;</p> <p>(5) the LTE antenna support structures would comply with applicable state and federal height restrictions, and any height restrictions mandated by an applicable comprehensive land use plan adopted by an airport land use commission. The new monopole does not exceed 70 feet in height without appurtenances and attachments;</p> <p>(6) each new central system switch is located within an existing enclosed structure at a publicly owned project site, or is housed at an existing private communications facility; and</p> <p>(7) the site is not located on a school site or sacred cultural site.</p> <p><u>Categorical Exemption Findings:</u></p> <p>To the extent some leased circuit work may need to occur outside of a PSBN site, such work would involve minor alteration of existing facilities, mechanical equipment, and location of new small facilities as well as expansion of use associated with this activity since the fiber for the leased circuit lines are dedicated to providing this type of connectivity. Leased circuit work would not include the removal of healthy, mature scenic trees and would not be located in a particularly sensitive environment, and there are no cumulative impacts, unusual circumstances, or other limiting factors that would make the categorical exemptions inapplicable based on the project records.</p>

REGISTRAR - RECORDER/COUNTY CLERK

Notice of Exemption (NOE)

Document Filed With: County Clerk County of Los Angeles 12400 Imperial Highway, Norwalk, CA 90650			
From (Public Agency):		Los Angeles Regional Interoperable Communications System (LA-RICS) Authority	
Project Title:	LA-RICS Public Safety Broadband Network (PSBN), also known as LA-RICS Long Term Evolution (LTE) System	Site Number:	LAFD101
Facility Name:	Los Angeles Fire Station 101	Facility Type:	Public Safety Entity
Project Description: (Technical Specifications)	Development of Site LAFD101 will consist of an LTE facility with a new monopole, which shall not exceed 70 feet tall (without appurtenances and attachments), except to the extent it is possible to collocate antennas on existing towers and infrastructure, along with LTE communications and auxiliary equipment, appurtenant ground equipment (e.g. emergency generator, fuel tank, and utility conduits), and any off-site leased circuit work if needed, to support operation of the LTE facility as appropriate. The facility will be developed on previously disturbed land.		
Jurisdiction Location:	City of Los Angeles	County Location:	Los Angeles
Site Address:	1414 W. 25th Street, San Pedro, CA 90732		
LatitudeWGS84:		LongitudeWGS84:	
Description of Nature, Purpose, and Beneficiaries of Project:	The LA-RICS LTE System Project is a modern, wireless voice and data communications system that would support 34,000 public safety responders and protect Los Angeles County's 10 million residents and 26 million annual visitors. The LTE technology would provide day-to-day data communication service for individual public safety agencies in Los Angeles County; enable critical communications for emergency response and regional interoperability; give emergency responders high speed access to life-saving multimedia information; and support the National Broadband Initiative.		
Name of Public Agency Approving Project:	LA-RICS Authority		
Name of Person or Agency Carrying Out Project:	LA-RICS Authority		
Exempt Status: Statutory Exemptions. Public Resources Code Section 21080.25. Categorical Exemptions. CEQA Guidelines Sections 15301, 15303, 15304.			Exempt
<p><u>Statutory Exemption Findings:</u></p> <p>(1) the site is publicly owned;</p> <p>(2) construction and implementation at the site would not have a substantial adverse impact on wetlands, riparian areas, or habitat of significant value, and would not harm any species protected by the federal Endangered Species Act of 1973 (16 U.S.C. Sec. 1531 et seq), the Native Plant Protection Act (Chapter 10 (commencing with Section 1900) of the Fish and Game Code), or The California Endangered Species Act (Chapter 1.5 (commencing with Section 2050) of Division 3 of the Fish and Game Code), or the habitat of those species;</p> <p>(3) construction and implementation at the site would not have a substantial adverse impact on historical resources pursuant to Section 21084.1 of the Public Resources Code;</p> <p>(4) operation of the project at the site would not exceed the maximum permissible exposure standards established by the Federal Communications Commission, as set forth in Sections 1.1307 and 1.1310 of Title 47 of the Code of Federal Regulations;</p> <p>(5) the LTE antenna support structures would comply with applicable state and federal height restrictions, and any height restrictions mandated by an applicable comprehensive land use plan adopted by an airport land use commission. The new monopole does not exceed 70 feet in height without appurtenances and attachments;</p> <p>(6) each new central system switch is located within an existing enclosed structure at a publicly owned project site, or is housed at an existing private communications facility; and</p> <p>(7) the site is not located on a school site or sacred cultural site.</p> <p><u>Categorical Exemption Findings:</u></p> <p>To the extent some leased circuit work may need to occur outside of a PSBN site, such work would involve minor alteration of existing facilities, mechanical equipment, and location of new small facilities as well as minor alteration in the condition of land within the public right-of-way. There would be negligible to no expansion of use associated with this activity since the fiber for the leased circuit lines are dedicated to providing this type of connectivity. Leased circuit work would not include the removal of healthy, mature scenic trees and would not be located in a particularly sensitive environment, and there are no cumulative impacts, unusual circumstances, or other limiting factors that would make the categorical exemptions inapplicable based on the project records.</p>

Notice of Exemption (NOE)

Document Filed With: County Clerk County of Los Angeles 12400 Imperial Highway, Norwalk, CA 90650			
From (Public Agency):		Los Angeles Regional Interoperable Communications System (LA-RICS) Authority	
Project Title:	LA-RICS Public Safety Broadband Network (PSBN), also known as LA-RICS Long Term Evolution (LTE) System	Site Number:	LAN
Facility Name:	Lancaster Sheriff's Station	Facility Type:	Public Safety Entity
Project Description: (Technical Specifications)	Development of Site LAN will consist of an LTE facility with a new monopole, which shall not exceed 70 feet tall (without appurtenances and attachments), except to the extent it is possible to collocate antennas on existing towers and infrastructure, along with LTE communications and auxiliary equipment, appurtenant ground equipment (e.g. emergency generator, fuel tank, and utility conduits), and any off-site leased circuit work if needed, to support operation of the LTE facility as appropriate. The facility will be developed on previously disturbed land.		
Jurisdiction Location:	City of Lancaster	County Location:	Los Angeles
Site Address:	501 W. Lancaster, Lancaster, CA 93534		
LatitudeWGS84:		LongitudeWGS84:	
Description of Nature, Purpose, and Beneficiaries of Project:	The LA-RICS LTE System Project is a modern, wireless voice and data communications system that would support 34,000 public safety responders and protect Los Angeles County's 10 million residents and 26 million annual visitors. The LTE technology would provide day-to-day data communication service for individual public safety agencies in Los Angeles County; enable critical communications for emergency response and regional interoperability; give emergency responders high speed access to life-saving multimedia information; and support the National Broadband Initiative.		
Name of Public Agency Approving Project:	LA-RICS Authority		
Name of Person or Agency Carrying Out Project:	LA-RICS Authority		
Exempt Status: Statutory Exemptions. Public Resources Code Section 21080.25. Categorical Exemptions. CEQA Guidelines Sections 15301, 15303, 15304.			Exempt
Reasons Why	<p><u>Statutory Exemption Findings:</u></p> <p>(1) the site is publicly owned;</p> <p>(2) construction and implementation at the site would not have a substantial adverse impact on wetlands, riparian areas, or habitat of significant value, and would not harm any species protected by the federal Endangered Species Act of 1973 (16 U.S.C. Sec. 1531 et seq), the Native Plant Protection Act (Chapter 10 (commencing with Section 1900) of the Fish and Game Code), or The California Endangered Species Act (Chapter 1.5 (commencing with Section 2050) of Division 3 of the Fish and Game Code), or the habitat of those species;</p> <p>(3) construction and implementation at the site would not have a substantial adverse impact on historical resources pursuant to Section 21084.1 of the Public Resources Code;</p> <p>(4) operation of the project at the site would not exceed the maximum permissible exposure standards established by the Federal Communications Commission, as set forth in Sections 1.1307 and 1.1310 of Title 47 of the Code of Federal Regulations;</p> <p>(5) the LTE antenna support structures would comply with applicable state and federal height restrictions, and any height restrictions mandated by an applicable comprehensive land use plan adopted by an airport land use commission. The new monopole does not exceed 70 feet in height without appurtenances and attachments;</p> <p>(6) each new central system switch is located within an existing enclosed structure at a publicly owned project site, or is housed at an existing private communications facility; and</p> <p>(7) the site is not located on a school site or sacred cultural site.</p> <p><u>Categorical Exemption Findings:</u></p> <p>To the extent some leased circuit work may need to occur outside of a PSBN site, such work would involve minor alteration of existing facilities, mechanical equipment, and location of new small facilities as well as minor alteration in the condition of land within the public right-of-way. There would be negligible to no expansion of use associated with this activity since the fiber for the leased circuit lines are dedicated to providing this type of connectivity. Leased circuit work would not include the removal of healthy, mature scenic trees and would not be located in a particularly sensitive environment, and there are no cumulative impacts, unusual circumstances, or other limiting factors that would make the categorical exemptions inapplicable based on the project records.</p>

Notice of Exemption (NOE)

Document Filed With: County Clerk County of Los Angeles 12400 Imperial Highway, Norwalk, CA 90650			
From (Public Agency):		Los Angeles Regional Interoperable Communications System (LA-RICS) Authority	
Project Title:	LA-RICS Public Safety Broadband Network (PSBN), also known as LA-RICS Long Term Evolution (LTE) System	Site Number:	LAPDFTH
Facility Name:	Foothill Area Station	Facility Type:	Public Safety Entity
Project Description: (Technical Specifications)	Development of Site LAPDFTH will consist of an LTE facility with a new monopole, which shall not exceed 70 feet tall (without appurtenances and attachments), except to the extent it is possible to collocate antennas on existing towers and infrastructure, along with LTE communications and auxiliary equipment, appurtenant ground equipment (e.g. emergency generator, fuel tank, and utility conduits), and any off-site leased circuit work if needed, to support operation of the LTE facility as appropriate. The facility will be developed on previously disturbed land.		
Jurisdiction Location:	City of Los Angeles	County Location:	Los Angeles
Site Address:	12760 Osborne Street, Pacoima, CA 91331		
LatitudeWGS84:		LongitudeWGS84:	
Description of Nature, Purpose, and Beneficiaries of Project:	The LA-RICS LTE System Project is a modern, wireless voice and data communications system that would support 34,000 public safety responders and protect Los Angeles County's 10 million residents and 26 million annual visitors. The LTE technology would provide day-to-day data communication service for individual public safety agencies in Los Angeles County; enable critical communications for emergency response and regional interoperability; give emergency responders high speed access to life-saving multimedia information; and support the National Broadband Initiative.		
Name of Public Agency Approving Project:	LA-RICS Authority		
Name of Person or Agency Carrying Out Project:	LA-RICS Authority		
Exempt Status: Statutory Exemptions. Public Resources Code Section 21080.25. Categorical Exemptions. CEQA Guidelines Sections 15301, 15303, 15304.			Exempt

Reasons Why

Statutory Exemption Findings:

- (1) the site is publicly owned;
- (2) construction and implementation at the site would not have a substantial adverse impact on wetlands, riparian areas, or habitat of significant value, and would not harm any species protected by the federal Endangered Species Act of 1973 (16 U.S.C. Sec. 1531 et seq), the Native Plant Protection Act (Chapter 10 (commencing with Section 1900) of the Fish and Game Code), or The California Endangered Species Act (Chapter 1.5 (commencing with Section 2050) of Division 3 of the Fish and Game Code), or the habitat of those species;
- (3) construction and implementation at the site would not have a substantial adverse impact on historical resources pursuant to Section 21084.1 of the Public Resources Code;
- (4) operation of the project at the site would not exceed the maximum permissible exposure standards established by the Federal Communications Commission, as set forth in Sections 1.1307 and 1.1310 of Title 47 of the Code of Federal Regulations;
- (5) the LTE antenna support structures would comply with applicable state and federal height restrictions, and any height restrictions mandated by an applicable comprehensive land use plan adopted by an airport land use commission. The new monopole does not exceed 70 feet in height without appurtenances and attachments;
- (6) each new central system switch is located within an existing enclosed structure at a publicly owned project site, or is housed at an existing private communications facility; and
- (7) the site is not located on a school site or sacred cultural site.

Categorical Exemption Findings:

To the extent some leased circuit work may need to occur outside of a PSBN site, such work would involve minor alteration of existing facilities, mechanical equipment, and location of new small facilities as well as minor alteration in the condition of land within the public right-of-way. There would be negligible to no expansion of use associated with this activity since the fiber for the leased circuit lines are dedicated to providing this type of connectivity. Leased circuit work would not include the removal of healthy, mature scenic trees and would not be located in a particularly sensitive environment, and there are no cumulative impacts, unusual circumstances, or other limiting factors that would make the categorical exemptions inapplicable based on the project records.

LatitudeWGS84:		LongitudeWGS84:	
Description of Nature, Purpose, and Beneficiaries of Project:	The LA-RICS LTE System Project is a modern, wireless voice and data communications system that would support 34,000 public safety responders and protect Los Angeles County's 10 million residents and 26 million annual visitors. The LTE technology would provide day-to-day data communication service for individual public safety agencies in Los Angeles County; enable critical communications for emergency response and regional interoperability; give emergency responders high speed access to life-saving multimedia information; and support the National Broadband Initiative.		
Name of Public Agency Approving Project:	LA-RICS Authority		
Name of Person or Agency Carrying Out Project:	LA-RICS Authority		
Exempt Status: Statutory Exemptions. Public Resources Code Section 21080.25. Categorical Exemptions. CEQA Guidelines Sections 15301, 15303, 15304.			Exempt
Reasons Why Project Site is:	<p><u>Statutory Exemption Findings:</u></p> <p>(1) the site is publicly owned;</p> <p>(2) construction and implementation at the site would not have a substantial adverse impact on wetlands, riparian areas, or habitat of significant value, and would not harm any species protected by the federal Endangered Species Act of 1973 (16 U.S.C. Sec. 1531 et seq), the Native Plant Protection Act (Chapter 10 (commencing with Section 1900) of the Fish and Game Code), or The California Endangered Species Act (Chapter 1.5 (commencing with Section 2050) of Division 3 of the Fish and Game Code), or the habitat of those species;</p> <p>(3) construction and implementation at the site would not have a substantial adverse impact on historical resources pursuant to Section 21084.1 of the Public Resources Code;</p> <p>(4) operation of the project at the site would not exceed the maximum permissible exposure standards established by the Federal Communications Commission, as set forth in Sections 1.1307 and 1.1310 of Title 47 of the Code of Federal Regulations;</p> <p>(5) the LTE antenna support structures would comply with applicable state and federal height restrictions, and any height restrictions mandated by an applicable comprehensive land use plan adopted by an airport land use commission. The new monopole does not exceed 70 feet in height without appurtenances and attachments;</p> <p>(6) each new central system switch is located within an existing enclosed structure at a publicly owned project site, or is housed at an existing private communications facility; and</p> <p>(7) the site is not located on a school site or sacred cultural site.</p> <p><u>Categorical Exemption Findings:</u></p> <p>To the extent some leased circuit work may need to occur outside of a PSBN site, such work would involve minor alteration of existing facilities, mechanical equipment, and location of new small facilities as well as minor alteration in the condition of land within the public right-of-way. There would be negligible to no expansion of use associated with this activity since the fiber for the leased circuit lines are dedicated to providing this type of connectivity. Leased circuit work would not include the removal of healthy, mature scenic trees and would not be located in a particularly sensitive environment, and there are no cumulative impacts, unusual circumstances, or other limiting factors that would make the categorical exemptions inapplicable based on the project records.</p>

Notice of Exemption (NOE)

Document Filed With: County Clerk County of Los Angeles 12400 Imperial Highway, Norwalk, CA 90650			
From (Public Agency):		Los Angeles Regional Interoperable Communications System (LA-RICS) Authority	
Project Title:	LA-RICS Public Safety Broadband Network (PSBN), also known as LA-RICS Long Term Evolution (LTE) System	Site Number:	LAPDPAC
Facility Name:	Pacific Area Station	Facility Type:	Public Safety Entity
Project Description: (Technical Specifications)	Development of Site LAPDPAC will consist of an LTE facility with a new monopole, which shall not exceed 70 feet tall (without appurtenances and attachments), except to the extent it is possible to collocate antennas on existing towers and infrastructure, along with LTE communications and auxiliary equipment, appurtenant ground equipment (e.g. emergency generator, fuel tank, and utility conduits), and any off-site leased circuit work if needed, to support operation of the LTE facility as appropriate. The facility will be developed on previously disturbed land.		
Jurisdiction Location:	City of Los Angeles	County Location:	Los Angeles
Site Address:	12312 Culver Boulevard, Los Angeles, CA 90066		
LatitudeWGS84:		LongitudeWGS84:	
Description of Nature, Purpose, and Beneficiaries of Project:	The LA-RICS LTE System Project is a modern, wireless voice and data communications system that would support 34,000 public safety responders and protect Los Angeles County's 10 million residents and 26 million annual visitors. The LTE technology would provide day-to-day data communication service for individual public safety agencies in Los Angeles County; enable critical communications for emergency response and regional interoperability; give emergency responders high speed access to life-saving multimedia information; and support the National Broadband Initiative.		
Name of Public Agency Approving Project:	LA-RICS Authority		
Name of Person or Agency Carrying Out Project:	LA-RICS Authority		
Exempt Status: Statutory Exemptions. Public Resources Code Section 21080.25. Categorical Exemptions. CEQA Guidelines Sections 15301, 15303, 15304.			Exempt

REGISTRAR - RECORDER/COUNTY CLERK

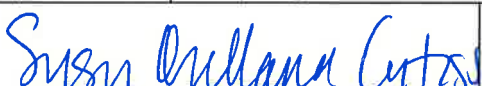

Notice of Exemption (NOE)

Document Filed With: County Clerk County of Los Angeles 12400 Imperial Highway, Norwalk, CA 90650			
From (Public Agency):		Los Angeles Regional Interoperable Communications System (LA-RICS) Authority	
Project Title:	LA-RICS Public Safety Broadband Network (PSBN), also known as LA-RICS Long Term Evolution (LTE) System	Site Number:	LAPDRAM
Facility Name:	Rampart Area Station	Facility Type:	Public Safety Entity
Project Description: (Technical Specifications)	Development of Site LAPDRAM will consist of an LTE facility with a new monopole, which shall not exceed 70 feet tall (without appurtenances and attachments), except to the extent it is possible to collocate antennas on existing towers and infrastructure, along with LTE communications and auxiliary equipment, appurtenant ground equipment (e.g. emergency generator, fuel tank, and utility conduits), and any off-site leased circuit work if needed, to support operation of the LTE facility as appropriate. The facility will be developed on previously disturbed land.		
Jurisdiction Location:	City of Los Angeles	County Location:	Los Angeles
Site Address:	1401 W. Sixth Street, Los Angeles, CA 90017		
LatitudeWGS84:		LongitudeWGS84:	
Description of Nature, Purpose, and Beneficiaries of Project:	The LA-RICS LTE System Project is a modern, wireless voice and data communications system that would support 34,000 public safety responders and protect Los Angeles County's 10 million residents and 26 million annual visitors. The LTE technology would provide day-to-day data communication service for individual public safety agencies in Los Angeles County; enable critical communications for emergency response and regional interoperability; give emergency responders high speed access to life-saving multimedia information; and support the National Broadband Initiative.		
Name of Public Agency Approving Project:	LA-RICS Authority		
Name of Person or Agency Carrying Out Project:	LA-RICS Authority		
Exempt Status: Statutory Exemptions. Public Resources Code Section 21080.25. Categorical Exemptions. CEQA Guidelines Sections 15301, 15303, 15304.			Exempt

Reasons Why

Statutory Exemption Findings:
 (1) the site is publicly owned;
 (2) construction and implementation at the site would not have a substantial adverse impact on wetlands, riparian areas, or habitat of significant value, and would not harm any species protected by the federal Endangered Species Act of 1973 (16 U.S.C. Sec. 1531 et seq), the Native Plant Protection Act (Chapter 10 (commencing with Section 1900) of the Fish and Game Code), or The California Endangered Species Act (Chapter 1.5 (commencing with Section 2050) of Division 3 of the Fish and Game Code), or the habitat of those species;
 (3) construction and implementation at the site would not have a substantial adverse impact on historical resources pursuant to Section 21084.1 of the Public Resources Code;
 (4) operation of the project at the site would not exceed the maximum permissible exposure standards established by the Federal Communications Commission, as set forth in Sections 1.1307 and 1.1310 of Title 47 of the Code of Federal Regulations;
 (5) the LTE antenna support structures would comply with applicable state and federal height restrictions, and any height restrictions mandated by an applicable comprehensive land use plan adopted by an airport land use commission. The new monopole does not exceed 70 feet in height without appurtenances and attachments;
 (6) each new central system switch is located within an existing enclosed structure at a publicly owned project site, or is housed at an existing private communications facility; and
 (7) the site is not located on a school site or sacred cultural site.

Categorical Exemption Findings:
 To the extent some leased circuit work may need to occur outside of a PSBN site, such work would involve minor alteration of existing facilities, mechanical equipment, and location of new small facilities as well as minor alteration in the condition of land within the public right-of-way. There would be negligible to no expansion of use associated with this activity since the fiber for the leased circuit lines are dedicated to providing this type of connectivity. Leased circuit work would not include the removal of healthy, mature scenic trees and would not be located in a particularly sensitive environment, and there are no cumulative impacts, unusual circumstances, or other limiting factors that would make the categorical exemptions inapplicable based on the project records.

Notice of Exemption (NOE)

Document Filed With: County Clerk County of Los Angeles 12400 Imperial Highway, Norwalk, CA 90650			
From (Public Agency):		Los Angeles Regional Interoperable Communications System (LA-RICS) Authority	
Project Title:	LA-RICS Public Safety Broadband Network (PSBN), also known as LA-RICS Long Term Evolution (LTE) System	Site Number:	LAPDWLA
Facility Name:	West Los Angeles Area Station	Facility Type:	Public Safety Entity
Project Description: (Technical Specifications)	Development of Site LAPDWLA will consist of an LTE facility with a new monopole, which shall not exceed 70 feet tall (without appurtenances and attachments), except to the extent it is possible to collocate antennas on existing towers and infrastructure, along with LTE communications and auxiliary equipment, appurtenant ground equipment (e.g. emergency generator, fuel tank, and utility conduits), and any off-site leased circuit work if needed, to support operation of the LTE facility as appropriate. The facility will be developed on previously disturbed land.		
Jurisdiction Location:	City of Los Angeles	County Location:	Los Angeles
Site Address:	1663 Butler Avenue, Los Angeles, CA 90025		
LatitudeWGS84:		LongitudeWGS84:	
Description of Nature, Purpose, and Beneficiaries of Project:	The LA-RICS LTE System Project is a modern, wireless voice and data communications system that would support 34,000 public safety responders and protect Los Angeles County's 10 million residents and 26 million annual visitors. The LTE technology would provide day-to-day data communication service for individual public safety agencies in Los Angeles County; enable critical communications for emergency response and regional interoperability; give emergency responders high speed access to life-saving multimedia information; and support the National Broadband Initiative.		
Name of Public Agency Approving Project:	LA-RICS Authority		
Name of Person or Agency Carrying Out Project:	LA-RICS Authority		
Exempt Status: Statutory Exemptions. Public Resources Code Section 21080.25. Categorical Exemptions. CEQA Guidelines Sections 15301, 15303, 15304.			Exempt
Reasons Why the Project Site	<p><u>Statutory Exemption Findings:</u></p> <p>(1) the site is publicly owned;</p> <p>(2) construction and implementation at the site would not have a substantial adverse impact on wetlands, riparian areas, or habitat of significant value, and would not harm any species protected by the federal Endangered Species Act of 1973 (16 U.S.C. Sec. 1531 et seq), the Native Plant Protection Act (Chapter 10 (commencing with Section 1900) of the Fish and Game Code), or The California Endangered Species Act (Chapter 1.5 (commencing with Section 2050) of Division 3 of the Fish and Game Code), or the habitat of those species;</p> <p>(3) construction and implementation at the site would not have a substantial adverse impact on historical resources pursuant to Section 21084.1 of the Public Resources Code;</p> <p>(4) operation of the project at the site would not exceed the maximum permissible exposure standards established by the Federal Communications Commission, as set forth in Sections 1.1307 and 1.1310 of Title 47 of the Code of Federal Regulations;</p> <p>(5) the LTE antenna support structures would comply with applicable state and federal height restrictions, and any height restrictions mandated by an applicable comprehensive land use plan adopted by an airport land use commission. The new monopole does not exceed 70 feet in height without appurtenances and attachments;</p> <p>(6) each new central system switch is located within an existing enclosed structure at a publicly owned project site, or is housed at an existing private communications facility; and</p> <p>(7) the site is not located on a school site or sacred cultural site.</p> <p><u>Categorical Exemption Findings:</u></p> <p>To the extent some leased circuit work may need to occur outside of a PSBN site, such work would involve minor alteration of existing facilities, mechanical equipment, and location of new small facilities as well as minor alteration in the condition of land within the public right-of-way. There would be negligible to no expansion of use associated with this activity since the fiber for the leased circuit lines are dedicated to providing this type of connectivity. Leased circuit work would not include the removal of healthy, mature scenic trees and would not be located in a particularly sensitive environment, and there are no cumulative impacts, unusual circumstances, or other limiting factors that would make the categorical exemptions inapplicable based on the project records.</p>

Project Title:	LA-RICS Public Safety Broadband Network (PSBN), also known as LA-RICS Long Term Evolution (LTE) System	Site Number:	LASDLKD
Facility Name:	Lakewood Sheriff's Station	Facility Type:	Public Safety Entity
Project Description: (Technical Specifications)	Development of Site LASDLKD will consist of an LTE facility with a new monopole, which shall not exceed 70 feet tall (without appurtenances and attachments), except to the extent it is possible to collocate antennas on existing towers and infrastructure, along with LTE communications and auxiliary equipment, appurtenant ground equipment (e.g. emergency generator, fuel tank, and utility conduits), and any off-site leased circuit work if needed, to support operation of the LTE facility as appropriate. The facility will be developed on previously disturbed land.		
Jurisdiction Location:	City of Lakewood	County Location:	Los Angeles
Site Address:	5130 Clark Avenue, Lakewood, CA 90712		
LatitudeWGS84:		LongitudeWGS84:	
Description of Nature, Purpose, and Beneficiaries of Project:	The LA-RICS LTE System Project is a modern, wireless voice and data communications system that would support 34,000 public safety responders and protect Los Angeles County's 10 million residents and 26 million annual visitors. The LTE technology would provide day-to-day data communication service for individual public safety agencies in Los Angeles County; enable critical communications for emergency response and regional interoperability; give emergency responders high speed access to life-saving multimedia information; and support the National Broadband Initiative.		
Name of Public Agency Approving Project:	LA-RICS Authority		
Name of Person or Agency Carrying Out Project:	LA-RICS Authority		
Exempt Status: Statutory Exemptions. Public Resources Code Section 21080.25. Categorical Exemptions. CEQA Guidelines Sections 15301, 15303, 15304.			Exempt
Reasons Why	<p><u>Statutory Exemption Findings:</u></p> <p>(1) the site is publicly owned;</p> <p>(2) construction and implementation at the site would not have a substantial adverse impact on wetlands, riparian areas, or habitat of significant value, and would not harm any species protected by the federal Endangered Species Act of 1973 (16 U.S.C. Sec. 1531 et seq), the Native Plant Protection Act (Chapter 10 (commencing with Section 1900) of the Fish and Game Code), or The California Endangered Species Act (Chapter 1.5 (commencing with Section 2050) of Division 3 of the Fish and Game Code), or the habitat of those species;</p> <p>(3) construction and implementation at the site would not have a substantial adverse impact on historical resources pursuant to Section 21084.1 of the Public Resources Code;</p> <p>(4) operation of the project at the site would not exceed the maximum permissible exposure standards established by the Federal Communications Commission, as set forth in Sections 1.1307 and 1.1310 of Title 47 of the Code of Federal Regulations;</p> <p>(5) the LTE antenna support structures would comply with applicable state and federal height restrictions, and any height restrictions mandated by an applicable comprehensive land use plan adopted by an airport land use commission. The new monopole does not exceed 70 feet in height without appurtenances and attachments;</p> <p>(6) each new central system switch is located within an existing enclosed structure at a publicly owned project site, or is housed at an existing private communications facility; and</p> <p>(7) the site is not located on a school site or sacred cultural site.</p> <p><u>Categorical Exemption Findings:</u></p> <p>To the extent some leased circuit work may need to occur outside of a PSBN site, such work would involve minor alteration of existing facilities, mechanical equipment, and location of new small facilities as well as minor alteration in the condition of land within the public right-of-way. There would be negligible to no expansion of use associated with this activity since the fiber for the leased circuit lines are dedicated to providing this type of connectivity. Leased circuit work would not include the removal of healthy, mature scenic trees and would not be located in a particularly sensitive environment, and there are no cumulative impacts, unusual circumstances, or other limiting factors that would make the categorical exemptions inapplicable based on the project records.</p>

Exempt Status: Statutory Exemptions. Public Resources Code Section 21080.25. Categorical Exemptions. CEQA Guidelines Sections 15301, 15303, 15304.			Exempt
Reason why	<p><u>Statutory Exemption Findings:</u></p> <p>(1) the site is publicly owned;</p> <p>(2) construction and implementation at the site would not have a substantial adverse impact on wetlands, riparian areas, or habitat of significant value, and would not harm any species protected by the federal Endangered Species Act of 1973 (16 U.S.C. Sec. 1531 et seq), the Native Plant Protection Act (Chapter 10 (commencing with Section 1900) of the Fish and Game Code), or The California Endangered Species Act (Chapter 1.5 (commencing with Section 2050) of Division 3 of the Fish and Game Code), or the habitat of those species;</p> <p>(3) construction and implementation at the site would not have a substantial adverse impact on historical resources pursuant to Section 21084.1 of the Public Resources Code;</p> <p>(4) operation of the project at the site would not exceed the maximum permissible exposure standards established by the Federal Communications Commission, as set forth in Sections 1.1307 and 1.1310 of Title 47 of the Code of Federal Regulations;</p> <p>(5) the LTE antenna support structures would comply with applicable state and federal height restrictions, and any height restrictions mandated by an applicable comprehensive land use plan adopted by an airport land use commission. The new monopole does not exceed 70 feet in height without appurtenances and attachments;</p> <p>(6) each new central system switch is located within an existing enclosed structure at a publicly owned project site, or is housed at an existing private communications facility; and</p> <p>(7) the site is not located on a school site or sacred cultural site.</p> <p><u>Categorical Exemption Findings:</u></p> <p>To the extent some leased circuit work may need to occur outside of a PSBN site, such work would involve minor alteration of existing facilities, mechanical equipment, and location of new small facilities as well as minor alteration in the condition of land within the public right-of-way. There would be negligible to no expansion of use associated with this activity since the fiber for the leased circuit lines are dedicated to providing this type of connectivity. Leased circuit work would not include the removal of healthy, mature scenic trees and would not be located in a particularly sensitive environment, and there are no cumulative impacts, unusual circumstances, or other limiting factors that would make the categorical exemptions inapplicable based on the project records.</p>

LA-RICS 2013 (vR12_2-19-14_mp)

Notice of Exemption (NOE)

Document Filed With: County Clerk County of Los Angeles 12400 Imperial Highway, Norwalk, CA 90650			
From (Public Agency):		Los Angeles Regional Interoperable Communications System (LA-RICS) Authority	
Project Title:	LA-RICS Public Safety Broadband Network (PSBN), also known as LA-RICS Long Term Evolution (LTE) System	Site Number:	LASDTEM
Facility Name:	Temple Sheriff's Station	Facility Type:	Public Safety Entity
Project Description: (Technical Specifications)	Development of Site LASDTEM will consist of an LTE facility with a new monopole, which shall not exceed 70 feet tall (without appurtenances and attachments), except to the extent it is possible to collocate antennas on existing towers and infrastructure, along with LTE communications and auxiliary equipment, appurtenant ground equipment (e.g. emergency generator, fuel tank, and utility conduits), and any off-site leased circuit work if needed, to support operation of the LTE facility as appropriate. The facility will be developed on previously disturbed land.		
Jurisdiction Location:	City of Temple City	County Location:	Los Angeles
Site Address:	8838 E. Las Tunas Drive, Temple City, CA 91780		
LatitudeWGS84:		LongitudeWGS84:	
Description of Nature, Purpose, and Beneficiaries of Project:	The LA-RICS LTE System Project is a modern, wireless voice and data communications system that would support 34,000 public safety responders and protect Los Angeles County's 10 million residents and 26 million annual visitors. The LTE technology would provide day-to-day data communication service for individual public safety agencies in Los Angeles County; enable critical communications for emergency response and regional interoperability; give emergency responders high speed access to life-saving multimedia information; and support the National Broadband Initiative.		
Name of Public Agency Approving Project:	LA-RICS Authority		
Name of Person or Agency Carrying Out Project:	LA-RICS Authority		
Exempt Status: Statutory Exemptions. Public Resources Code Section 21080.25. Categorical Exemptions. CEQA Guidelines Sections 15301, 15303, 15304.			Exempt
Reasons Why the Project Site	<p><u>Statutory Exemption Findings:</u></p> <p>(1) the site is publicly owned;</p> <p>(2) construction and implementation at the site would not have a substantial adverse impact on wetlands, riparian areas, or habitat of significant value, and would not harm any species protected by the federal Endangered Species Act of 1973 (16 U.S.C. Sec. 1531 et seq), the Native Plant Protection Act (Chapter 10 (commencing with Section 1900) of the Fish and Game Code), or The California Endangered Species Act (Chapter 1.5 (commencing with Section 2050) of Division 3 of the Fish and Game Code), or the habitat of those species;</p> <p>(3) construction and implementation at the site would not have a substantial adverse impact on historical resources pursuant to Section 21084.1 of the Public Resources Code;</p> <p>(4) operation of the project at the site would not exceed the maximum permissible exposure standards established by the Federal Communications Commission, as set forth in Sections 1.1307 and 1.1310 of Title 47 of the Code of Federal Regulations;</p> <p>(5) the LTE antenna support structures would comply with applicable state and federal height restrictions, and any height restrictions mandated by an applicable comprehensive land use plan adopted by an airport land use commission. The new monopole does not exceed 70 feet in height without appurtenances and attachments;</p> <p>(6) each new central system switch is located within an existing enclosed structure at a publicly owned project site, or is housed at an existing private communications facility; and</p> <p>(7) the site is not located on a school site or sacred cultural site.</p> <p><u>Categorical Exemption Findings:</u></p> <p>To the extent some leased circuit work may need to occur outside of a PSBN site, such work would involve minor alteration of existing facilities, mechanical equipment, and location of new small facilities as well as minor alteration in the condition of land within the public right-of-way. There would be negligible to no expansion of use associated with this activity since the fiber for the leased circuit lines are dedicated to providing this type of connectivity. Reasons Why	<p><u>Statutory Exemption Findings:</u></p> <p>(1) the site is publicly owned;</p> <p>(2) construction and implementation at the site would not have a substantial adverse impact on wetlands, riparian areas, or habitat of significant value, and would not harm any species protected by the federal Endangered Species Act of 1973 (16 U.S.C. Sec. 1531 et seq), the Native Plant Protection Act (Chapter 10 (commencing with Section 1900) of the Fish and Game Code), or The California Endangered Species Act (Chapter 1.5 (commencing with Section 2050) of Division 3 of the Fish and Game Code), or the habitat of those species;</p> <p>(3) construction and implementation at the site would not have a substantial adverse impact on historical resources pursuant to Section 21084.1 of the Public Resources Code;</p> <p>(4) operation of the project at the site would not exceed the maximum permissible exposure standards established by the Federal Communications Commission, as set forth in Sections 1.1307 and 1.1310 of Title 47 of the Code of Federal Regulations;</p> <p>(5) the LTE antenna support structures would comply with applicable state and federal height restrictions, and any height restrictions mandated by an applicable comprehensive land use plan adopted by an airport land use commission. The new monopole does not exceed 70 feet in height without appurtenances and attachments;</p> <p>(6) each new central system switch is located within an existing enclosed structure at a publicly owned project site, or is housed at an existing private communications facility; and</p> <p>(7) the site is not located on a school site or sacred cultural site.</p> <p><u>Categorical Exemption Findings:</u></p> <p>To the extent some leased circuit work may need to occur outside of a PSBN site, such work would involve minor alteration of existing facilities, mechanical equipment, and location of new small facilities as well as minor alteration in the condition of land within the public right-of-way. There would be negligible to no expansion of use associated with this activity since the fiber for the leased circuit lines are dedicated to providing this type of connectivity. Leased circuit work would not include the removal of healthy, mature scenic trees and would not be located in a particularly sensitive environment, and there are no cumulative impacts, unusual circumstances, or other limiting factors that would make the categorical exemptions inapplicable based on the project records.</p>

Notice of Exemption (NOE)

Document Filed With: County Clerk County of Los Angeles 12400 Imperial Highway, Norwalk, CA 90650			
From (Public Agency):		Los Angeles Regional Interoperable Communications System (LA-RICS) Authority	
Project Title:	LA-RICS Public Safety Broadband Network (PSBN), also known as LA-RICS Long Term Evolution (LTE) System	Site Number:	LBFD021
Facility Name:	Long Beach Fire Station 21	Facility Type:	Public Safety Entity
Project Description: (Technical Specifications)	Development of Site LBFD021 will consist of an LTE facility with a new monopole, which shall not exceed 70 feet tall (without appurtenances and attachments), except to the extent it is possible to collocate antennas on existing towers and infrastructure, along with LTE communications and auxiliary equipment, appurtenant ground equipment (e.g. emergency generator, fuel tank, and utility conduits), and any off-site leased circuit work if needed, to support operation of the LTE facility as appropriate. The facility will be developed on previously disturbed land.		
Jurisdiction Location:	City of Long Beach	County Location:	Los Angeles
Site Address:	225 Marina Drive, Long Beach, CA 90803		
LatitudeWGS84:		LongitudeWGS84:	
Description of Nature, Purpose, and Beneficiaries of Project:	The LA-RICS LTE System Project is a modern, wireless voice and data communications system that would support 34,000 public safety responders and protect Los Angeles County's 10 million residents and 26 million annual visitors. The LTE technology would provide day-to-day data communication service for individual public safety agencies in Los Angeles County; enable critical communications for emergency response and regional interoperability; give emergency responders high speed access to life-saving multimedia information; and support the National Broadband Initiative.

There would be negligible to no expansion of use associated with this activity since the fiber for the leased circuit lines are dedicated to providing this type of connectivity. Leased circuit work would not include the removal of healthy, mature scenic trees and would not be located in a particularly sensitive environment, and there are no cumulative impacts, unusual circumstances, or other limiting factors that would make the categorical exemptions inapplicable based on the project records.</p>

REGISTRAR - RECORDER/COUNTY CLERK

Notice of Exemption (NOE)

Document Filed With: County Clerk County of Los Angeles 12400 Imperial Highway, Norwalk, CA 90650			
From (Public Agency):		Los Angeles Regional Interoperable Communications System (LA-RICS) Authority	
Project Title:	LA-RICS Public Safety Broadband Network (PSBN), also known as LA-RICS Long Term Evolution (LTE) System	Site Number:	MBFD001
Facility Name:	Manhattan Beach Fire Station 1	Facility Type:	Public Safety Entity
Project Description: (Technical Specifications)	Development of Site MBFD001 will consist of an LTE facility with a new monopole, which shall not exceed 70 feet tall (without appurtenances and attachments), except to the extent it is possible to collocate antennas on existing towers and infrastructure, along with LTE communications and auxiliary equipment, appurtenant ground equipment (e.g. emergency generator, fuel tank, and utility conduits), and any off-site leased circuit work if needed, to support operation of the LTE facility as appropriate. The facility will be developed on previously disturbed land.		
Jurisdiction Location:	City of Manhattan Beach	County Location:	Los Angeles
Site Address:	400 15th Street, Manhattan Beach, CA 90266		
LatitudeWGS84:		LongitudeWGS84:	
Description of Nature, Purpose, and Beneficiaries of Project:	The LA-RICS LTE System Project is a modern, wireless voice and data communications system that would support 34,000 public safety responders and protect Los Angeles County's 10 million residents and 26 million annual visitors. The LTE technology would provide day-to-day data communication service for individual public safety agencies in Los Angeles County; enable critical communications for emergency response and regional interoperability; give emergency responders high speed access to life-saving multimedia information; and support the National Broadband Initiative.		
Name of Public Agency Approving Project:	LA-RICS Authority		
Name of Person or Agency Carrying Out Project:	LA-RICS Authority		
Exempt Status: Statutory Exemptions. Public Resources Code Section 21080.25. Categorical Exemptions. CEQA Guidelines Sections 15301, 15303, 15304.			Exempt
Reasons Why	<p><u>Statutory Exemption Findings:</u></p> <p>(1) the site is publicly owned;</p> <p>(2) construction and implementation at the site would not have a substantial adverse impact on wetlands, riparian areas, or habitat of significant value, and would not harm any species protected by the federal Endangered Species Act of 1973 (16 U.S.C. Sec. 1531 et seq), the Native Plant Protection Act (Chapter 10 (commencing with Section 1900) of the Fish and Game Code), or The California Endangered Species Act (Chapter 1.5 (commencing with Section 2050) of Division 3 of the Fish and Game Code), or the habitat of those species;</p> <p>(3) construction and implementation at the site would not have a substantial adverse impact on historical resources pursuant to Section 21084.1 of the Public Resources Code;</p> <p>(4) operation of the project at the site would not exceed the maximum permissible exposure standards established by the Federal Communications Commission, as set forth in Sections 1.1307 and 1.1310 of Title 47 of the Code of Federal Regulations;</p> <p>(5) the LTE antenna support structures would comply with applicable state and federal height restrictions, and any height restrictions mandated by an applicable comprehensive land use plan adopted by an airport land use commission. The new monopole does not exceed 70 feet in height without appurtenances and attachments;</p> <p>(6) each new central system switch is located within an existing enclosed structure at a publicly owned project site, or is housed at an existing private communications facility; and</p> <p>(7) the site is not located on a school site or sacred cultural site.</p> <p><u>Categorical Exemption Findings:</u></p> <p>To the extent some leased circuit work may need to occur outside of a PSBN site, such work would involve minor alteration of existing facilities, mechanical equipment, and location of new small facilities as well as minor alteration in the condition of land within the public right-of-way. There would be negligible to no expansion of use associated with this activity since the fiber for the leased circuit lines are dedicated to providing this type of connectivity. Leased circuit work would not include the removal of healthy, mature scenic trees and would not be located in a particularly sensitive environment, and there are no cumulative impacts, unusual circumstances, or other limiting factors that would make the categorical exemptions inapplicable based on the project records.</p>

Project Title:	LA-RICS Public Safety Broadband Network (PSBN), also known as LA-RICS Long Term Evolution (LTE) System	Site Number:	MRFD002
Facility Name:	Monrovia Fire Station 2	Facility Type:	Public Safety Entity
Project Description: (Technical Specifications)	Development of Site MRFD002 will consist of an LTE facility with a new monopole, which shall not exceed 70 feet tall (without appurtenances and attachments), except to the extent it is possible to collocate antennas on existing towers and infrastructure, along with LTE communications and auxiliary equipment, appurtenant ground equipment (e.g. emergency generator, fuel tank, and utility conduits), and any off-site leased circuit work if needed, to support operation of the LTE facility as appropriate. The facility will be developed on previously disturbed land.		
Jurisdiction Location:	City of Monrovia	County Location:	Los Angeles
Site Address:	2053 S. Myrtle Avenue, Monrovia, CA 91016		
LatitudeWGS84:		LongitudeWGS84:	
Description of Nature, Purpose, and Beneficiaries of Project:	The LA-RICS LTE System Project is a modern, wireless voice and data communications system that would support 34,000 public safety responders and protect Los Angeles County's 10 million residents and 26 million annual visitors. The LTE technology would provide day-to-day data communication service for individual public safety agencies in Los Angeles County; enable critical communications for emergency response and regional interoperability; give emergency responders high speed access to life-saving multimedia information; and support the National Broadband Initiative.		
Name of Public Agency Approving Project:	LA-RICS Authority		
Name of Person or Agency Carrying Out Project:	LA-RICS Authority		
Exempt Status: Statutory Exemptions. Public Resources Code Section 21080.25. Categorical Exemptions. CEQA Guidelines Sections 15301, 15303, 15304.			Exempt

Reasons Why the Project Site

Statutory Exemption Findings:
 (1) the site is publicly owned;
 (2) construction and implementation at the site would not have a substantial adverse impact on wetlands, riparian areas, or habitat of significant value, and would not harm any species protected by the federal Endangered Species Act of 1973 (16 U.S.C. Sec. 1531 et seq), the Native Plant Protection Act (Chapter 10 (commencing with Section 1900) of the Fish and Game Code), or The California Endangered Species Act (Chapter 1.5 (commencing with Section 2050) of Division 3 of the Fish and Game Code), or the habitat of those species;
 (3) construction and implementation at the site would not have a substantial adverse impact on historical resources pursuant to Section 21084.1 of the Public Resources Code;
 (4) operation of the project at the site would not exceed the maximum permissible exposure standards established by the Federal Communications Commission, as set forth in Sections 1.1307 and 1.1310 of Title 47 of the Code of Federal Regulations;
 (5) the LTE antenna support structures would comply with applicable state and federal height restrictions, and any height restrictions mandated by an applicable comprehensive land use plan adopted by an airport land use commission. The new monopole does not exceed 70 feet in height without appurtenances and attachments;
 (6) each new central system switch is located within an existing enclosed structure at a publicly owned project site, or is housed at an existing private communications facility; and
 (7) the site is not located on a school site or sacred cultural site.
Categorical Exemption Findings:
 To the extent some leased circuit work may need to occur outside of a PSBN site, such work would involve minor alteration of existing facilities, mechanical equipment, and location of new small facilities as well as minor alteration in the condition of land within the public right-of-way. There would be negligible to no expansion of use associated with this activity since the fiber for the leased circuit lines are dedicated to providing this type of connectivity. Leased circuit work would not include the removal of healthy, mature scenic trees and would not be located in a particularly sensitive environment, and there are no cumulative impacts, unusual circumstances, or other limiting factors that would make the categorical exemptions inapplicable based on the project records.

Exempt Status: Statutory Exemptions. Public Resources Code Section 21080.25. Categorical Exemptions. CEQA Guidelines Sections 15301, 15303, 15304.			Exempt
Reasons Why:	<p><u>Statutory Exemption Findings:</u></p> <p>(1) the site is publicly owned;</p> <p>(2) construction and implementation at the site would not have a substantial adverse impact on wetlands, riparian areas, or habitat of significant value, and would not harm any species protected by the federal Endangered Species Act of 1973 (16 U.S.C. Sec. 1531 et seq), the Native Plant Protection Act (Chapter 10 (commencing with Section 1900) of the Fish and Game Code), or The California Endangered Species Act (Chapter 1.5 (commencing with Section 2050) of Division 3 of the Fish and Game Code), or the habitat of those species;</p> <p>(3) construction and implementation at the site would not have a substantial adverse impact on historical resources pursuant to Section 21084.1 of the Public Resources Code;</p> <p>(4) operation of the project at the site would not exceed the maximum permissible exposure standards established by the Federal Communications Commission, as set forth in Sections 1.1307 and 1.1310 of Title 47 of the Code of Federal Regulations;</p> <p>(5) the LTE antenna support structures would comply with applicable state and federal height restrictions, and any height restrictions mandated by an applicable comprehensive land use plan adopted by an airport land use commission. The new monopole does not exceed 70 feet in height without appurtenances and attachments;</p> <p>(6) each new central system switch is located within an existing enclosed structure at a publicly owned project site, or is housed at an existing private communications facility; and</p> <p>(7) the site is not located on a school site or sacred cultural site.</p> <p><u>Categorical Exemption Findings:</u></p> <p>To the extent some leased circuit work may need to occur outside of a PSBN site, such work would involve minor alteration of existing facilities, mechanical equipment, and location of new small facilities as well as minor alteration in the condition of land within the public right-of-way. There would be negligible to no expansion of use associated with this activity since the fiber for the leased circuit lines are dedicated to providing this type of connectivity. Leased circuit work would not include the removal of healthy, mature scenic trees and would not be located in a particularly sensitive environment, and there are no cumulative impacts, unusual circumstances, or other limiting factors that would make the categorical exemptions inapplicable based on the project records.</p>

REGISTRAR - RECORDER/COUNTY CLERK

RICS 2013 (vR12_2-19-14_mp)

Notice of Exemption (NOE)

Document Filed With: County Clerk County of Los Angeles 12400 Imperial Highway, Norwalk, CA 90650			
From (Public Agency):		Los Angeles Regional Interoperable Communications System (LA-RICS) Authority	
Project Title:	LA-RICS Public Safety Broadband Network (PSBN), also known as LA-RICS Long Term Evolution (LTE) System	Site Number:	RANCHO
Facility Name:	Rancho Los Amigos National Rehabilitation Center	Facility Type:	Medical
Project Description: (Technical Specifications)	Development of Site RANCHO will consist of an LTE facility with a new monopole, which shall not exceed 70 feet tall (without appurtenances and attachments), except to the extent it is possible to collocate antennas on existing towers and infrastructure, along with LTE communications and auxiliary equipment, appurtenant ground equipment (e.g. emergency generator, fuel tank, and utility conduits), and any off-site leased circuit work if needed, to support operation of the LTE facility as appropriate. The facility will be developed on previously disturbed land.		
Jurisdiction Location:	City of Downey	County Location:	Los Angeles
Site Address:	7601 E. Imperial Highway, Downey, CA 90242		
LatitudeWGS84:		LongitudeWGS84:	
Description of Nature, Purpose, and Beneficiaries of Project:	The LA-RICS LTE System Project is a modern, wireless voice and data communications system that would support 34,000 public safety responders and protect Los Angeles County's 10 million residents and 26 million annual visitors. The LTE technology would provide day-to-day data communication service for individual public safety agencies in Los Angeles County; enable critical communications for emergency response and regional interoperability; give emergency responders high speed access to life-saving multimedia information; and support the National Broadband Initiative.

LA-RICS 2013 (vR12_2-19-14.mp)

Notice of Exemption (NOE)

Document Filed With: County Clerk County of Los Angeles 12400 Imperial Highway, Norwalk, CA 90650			
From (Public Agency):		Los Angeles Regional Interoperable Communications System (LA-RICS) Authority	
Project Title:	LA-RICS Public Safety Broadband Network (PSBN), also known as LA-RICS Long Term Evolution (LTE) System	Site Number:	SFSFD04
Facility Name:	Santa Fe Springs Fire Station 4	Facility Type:	Public Safety Entity
Project Description: (Technical Specifications)	Development of Site SFSFD04 will consist of an LTE facility with a new monopole, which shall not exceed 70 feet tall (without appurtenances and attachments), except to the extent it is possible to collocate antennas on existing towers and infrastructure, along with LTE communications and auxiliary equipment, appurtenant ground equipment (e.g. emergency generator, fuel tank, and utility conduits), and any off-site leased circuit work if needed, to support operation of the LTE facility as appropriate. The facility will be developed on previously disturbed land.		
Jurisdiction Location:	City of Santa Fe Springs	County Location:	Los Angeles
Site Address:	11736 Telegraph Road, Santa Fe Springs, CA 90670		
LatitudeWGS84:		LongitudeWGS84:	
Description of Nature, Purpose, and Beneficiaries of Project:	The LA-RICS LTE System Project is a modern, wireless voice and data communications system that would support 34,000 public safety responders and protect Los Angeles County's 10 million residents and 26 million annual visitors. The LTE technology would provide day-to-day data communication service for individual public safety agencies in Los Angeles County; enable critical communications for emergency response and regional interoperability; give emergency responders high speed access to life-saving multimedia information; and support the National Broadband Initiative.		
Name of Public Agency Approving Project:	LA-RICS Authority		
Name of Person or Agency Carrying Out Project:	LA-RICS Authority		
Exempt Status: Statutory Exemptions. Public Resources Code Section 21080.25. Categorical Exemptions. CEQA Guidelines Sections 15301, 15303, 15304.			Exempt
Reasons Why	<p><u>Statutory Exemption Findings:</u></p> <p>(1) the site is publicly owned;</p> <p>(2) construction and implementation at the site would not have a substantial adverse impact on wetlands, riparian areas, or habitat of significant value, and would not harm any species protected by the federal Endangered Species Act of 1973 (16 U.S.C. Sec. 1531 et seq), the Native Plant Protection Act (Chapter 10 (commencing with Section 1900) of the Fish and Game Code), or The California Endangered Species Act (Chapter 1.5 (commencing with Section 2050) of Division 3 of the Fish and Game Code), or the habitat of those species;</p> <p>(3) construction and implementation at the site would not have a substantial adverse impact on historical resources pursuant to Section 21084.1 of the Public Resources Code;</p> <p>(4) operation of the project at the site would not exceed the maximum permissible exposure standards established by the Federal Communications Commission, as set forth in Sections 1.1307 and 1.1310 of Title 47 of the Code of Federal Regulations;</p> <p>(5) the LTE antenna support structures would comply with applicable state and federal height restrictions, and any height restrictions mandated by an applicable comprehensive land use plan adopted by an airport land use commission. The new monopole does not exceed 70 feet in height without appurtenances and attachments;</p> <p>(6) each new central system switch is located within an existing enclosed structure at a publicly owned project site, or is housed at an existing private communications facility; and</p> <p>(7) the site is not located on a school site or sacred cultural site.</p> <p><u>Categorical Exemption Findings:</u></p> <p>To the extent some leased circuit work may need to occur outside of a PSBN site, such work would involve minor alteration of existing facilities, mechanical equipment, and location of new small facilities as well as minor alteration in the condition of land within the public right-of-way. There would be negligible to no expansion of use associated with this activity since the fiber for the leased circuit lines are dedicated to providing this type of connectivity. Leased circuit work would not include the removal of healthy, mature scenic trees and would not be located in a particularly sensitive environment, and there are no cumulative impacts, unusual circumstances, or other limiting factors that would make the categorical exemptions inapplicable based on the project records.</p>

Project Title:	LA-RICS Public Safety Broadband Network (PSBN), also known as LA-RICS Long Term Evolution (LTE) System	Site Number:	TORC001
Facility Name:	City Hall Radio Tower	Facility Type:	Other
Project Description: (Technical Specifications)	Development of Site TORC001 will consist of an LTE facility with a new monopole, which shall not exceed 70 feet tall (without appurtenances and attachments), except to the extent it is possible to collocate antennas on existing towers and infrastructure, along with LTE communications and auxiliary equipment, appurtenant ground equipment (e.g. emergency generator, fuel tank, and utility conduits), and any off-site leased circuit work if needed, to support operation of the LTE facility as appropriate. The facility will be developed on previously disturbed land.		
Jurisdiction Location:	City of Torrance	County Location:	Los Angeles
Site Address:	3031 Torrance Boulevard, Torrance, CA 90503		
LatitudeWGS84:		LongitudeWGS84:	
Description of Nature, Purpose, and Beneficiaries of Project:	The LA-RICS LTE System Project is a modern, wireless voice and data communications system that would support 34,000 public safety responders and protect Los Angeles County's 10 million residents and 26 million annual visitors. The LTE technology would provide day-to-day data communication service for individual public safety agencies in Los Angeles County; enable critical communications for emergency response and regional interoperability; give emergency responders high speed access to life-saving multimedia information; and support the National Broadband Initiative.		
Name of Public Agency Approving Project:	LA-RICS Authority		
Name of Person or Agency Carrying Out Project:	LA-RICS Authority		
Exempt Status:	Statutory Exemptions. Public Resources Code Section 21080.25. Categorical Exemptions. CEQA Guidelines Sections 15301, 15303, 15304.		Exempt
Reasons Why	<p><u>Statutory Exemption Findings:</u></p> <p>(1) the site is publicly owned;</p> <p>(2) construction and implementation at the site would not have a substantial adverse impact on wetlands, riparian areas, or habitat of significant value, and would not harm any species protected by the federal Endangered Species Act of 1973 (16 U.S.C. Sec. 1531 et seq), the Native Plant Protection Act (Chapter 10 (commencing with Section 1900) of the Fish and Game Code), or The California Endangered Species Act (Chapter 1.5 (commencing with Section 2050) of Division 3 of the Fish and Game Code), or the habitat of those species;</p> <p>(3) construction and implementation at the site would not have a substantial adverse impact on historical resources pursuant to Section 21084.1 of the Public Resources Code;</p> <p>(4) operation of the project at the site would not exceed the maximum permissible exposure standards established by the Federal Communications Commission, as set forth in Sections 1.1307 and 1.1310 of Title 47 of the Code of Federal Regulations;</p> <p>(5) the LTE antenna support structures would comply with applicable state and federal height restrictions, and any height restrictions mandated by an applicable comprehensive land use plan adopted by an airport land use commission. The new monopole does not exceed 70 feet in height without appurtenances and attachments;</p> <p>(6) each new central system switch is located within an existing enclosed structure at a publicly owned project site, or is housed at an existing private communications facility; and</p> <p>(7) the site is not located on a school site or sacred cultural site.</p> <p><u>Categorical Exemption Findings:</u></p> <p>To the extent some leased circuit work may need to occur outside of a PSBN site, such work would involve minor alteration of existing facilities, mechanical equipment, and location of new small facilities as well as minor alteration in the condition of land within the public right-of-way. There would be negligible to no expansion of use associated with this activity since the fiber for the leased circuit lines are dedicated to providing this type of connectivity. Leased circuit work would not include the removal of healthy, mature scenic trees and would not be located in a particularly sensitive environment, and there are no cumulative impacts, unusual circumstances, or other limiting factors that would make the categorical exemptions inapplicable based on the project records.</p>

Exempt Status: Statutory Exemptions. Public Resources Code Section 21080.25. Categorical Exemptions. CEQA Guidelines Sections 15301, 15303, 15304.			Exempt
Reasons Why the Project Site is Exempt:	<p><u>Statutory Exemption Findings:</u></p> <p>(1) the site is publicly owned;</p> <p>(2) construction and implementation at the site would not have a substantial adverse impact on wetlands, riparian areas, or habitat of significant value, and would not harm any species protected by the federal Endangered Species Act of 1973 (16 U.S.C. Sec. 1531 et seq), the Native Plant Protection Act (Chapter 10 (commencing with Section 1900) of the Fish and Game Code), or The California Endangered Species Act (Chapter 1.5 (commencing with Section 2050) of Division 3 of the Fish and Game Code), or the habitat of those species;</p> <p>(3) construction and implementation at the site would not have a substantial adverse impact on historical resources pursuant to Section 21084.1 of the Public Resources Code;</p> <p>(4) operation of the project at the site would not exceed the maximum permissible exposure standards established by the Federal Communications Commission, as set forth in Sections 1.1307 and 1.1310 of Title 47 of the Code of Federal Regulations;</p> <p>(5) the LTE antenna support structures would comply with applicable state and federal height restrictions, and any height restrictions mandated by an applicable comprehensive land use plan adopted by an airport land use commission. The new monopole does not exceed 70 feet in height without appurtenances and attachments;</p> <p>(6) each new central system switch is located within an existing enclosed structure at a publicly owned project site, or is housed at an existing private communications facility; and</p> <p>(7) the site is not located on a school site or sacred cultural site.</p> <p><u>Categorical Exemption Findings:</u></p> <p>To the extent some leased circuit work may need to occur outside of a PSBN site, such work would involve minor alteration of existing facilities, mechanical equipment, and location of new small facilities as well as minor alteration in the condition of land within the public right-of-way. There would be negligible to no expansion of use associated with this activity since the fiber for the leased circuit lines are dedicated to providing this type of connectivity. Leased circuit work would not include the removal of healthy, mature scenic trees and would not be located in a particularly sensitive environment, and there are no cumulative impacts, unusual circumstances, or other limiting factors that would make the categorical exemptions inapplicable based on the project records.</p>

Notice of Exemption (NOE)

Document Filed With: County Clerk County of Los Angeles 12400 Imperial Highway, Norwalk, CA 90650			
From (Public Agency):		Los Angeles Regional Interoperable Communications System (LA-RICS) Authority	
Project Title:	LA-RICS Public Safety Broadband Network (PSBN), also known as LA-RICS Long Term Evolution (LTE) System	Site Number:	WCFD004
Facility Name:	West Covina Fire Station 4	Facility Type:	Public Safety Entity
Project Description: (Technical Specifications)	Development of Site WCFD004 will consist of an LTE facility with a new monopole, which shall not exceed 70 feet tall (without appurtenances and attachments), except to the extent it is possible to collocate antennas on existing towers and infrastructure, along with LTE communications and auxiliary equipment, appurtenant ground equipment (e.g. emergency generator, fuel tank, and utility conduits), and any off-site leased circuit work if needed, to support operation of the LTE facility as appropriate. The facility will be developed on previously disturbed land.		
Jurisdiction Location:	City of West Covina	County Location:	Los Angeles
Site Address:	1815 S. Azusa Avenue, West Covina, CA 91792		
LatitudeWGS84:		LongitudeWGS84:	
Description of Nature, Purpose, and Beneficiaries of Project:	The LA-RICS LTE System Project is a modern, wireless voice and data communications system that would support 34,000 public safety responders and protect Los Angeles County's 10 million residents and 26 million annual visitors. The LTE technology would provide day-to-day data communication service for individual public safety agencies in Los Angeles County; enable critical communications for emergency response and regional interoperability; give emergency responders high speed access to life-saving multimedia information; and support the National Broadband Initiative.
